Cognitive Interviewing Gordon B. Willis, 2004-09-14 The design and evaluation of questionnaires and of other written and oral materials is a challenging endeavor fraught with potential pitfalls *Cognitive Interviewing A Tool for Improving Questionnaire Design* describes a means of systematically developing survey questions through investigations that intensively probe the thought processes of individuals who are presented with those inquiries The work provides general guidance about questionnaire design development and pre testing sequence with an emphasis on the cognitive interview In particular the book gives detailed instructions about the use of verbal probing techniques and how one can elicit additional information from subjects about their thinking and about the manner in which they react to tested questions These tools help researchers discover how well their questions are working where they are failing and determine what they can do to rectify the wide variety of problems that may surface while working with questionnaires

Analysis of the Cognitive Interview in Questionnaire Design Gordon B. Willis, 2015-02-06 Cognitive interviewing based on the self report methods of Ericsson and Simon is a key form of qualitative research that has developed over the past thirty years The primary objective of cognitive interviewing also known as cognitive testing is to understand the cognitive mechanisms underlying the survey response process An equally

important aim is contributing to the development of best practices for writing survey questions that are well understood and that produce low levels of response error In particular an important applied objective is the evaluation of a particular set of questions items or other materials under development by questionnaire designers to determine means for rewording reordering or reconceptualizing Hence as well as providing an empirical psychologically oriented framework for the general study of questionnaire design cognitive interviewing has been adopted as a production mechanism for the improvement of a wide variety of survey questions whether factual behavioral or attitudinal in nature As with other methods that rely on qualitative data cognitive interviewing has increasingly been criticized for being lax in the critical area of the development of systematic methods for data reduction analysis and reporting of results Practitioners tend to conduct cognitive interviewing in varying ways and the data coding and compilation activities undertaken are often nonstandardized and poorly described There is a considerable need for further development and documentation relating not only to a description of this variation but also to providing a set of recommendations for minimal standards if not best practices The proposed volume endeavors to address this clear omission

ePro Brian Tiplady, 2016-05-13 Patient self reported data has become increasingly important in today's clinical trials Trials in some disease indications rely upon patient recorded diary data as the primary endpoint to demonstrate drug efficacy including for example indications such as insomnia migraine and pain In addition improvements in quality of life measured using patient questionnaires can now be included as claims on drug labelling Traditionally these data have been collected using paper questionnaires and diaries issued to subjects Regulators and the industry have become

increasingly aware of the limitations of recording patient reported outcomes data on paper including data quality and integrity issues As a result there is a growing interest in collection of patient reported outcomes data using electronic means ePRO Solutions include handheld PDAs Interactive Voice Response IVR systems and other site based hardware such as touchscreen PCs Recently there has been much open debate with the regulators around the use of ePRO in clinical drug submissions US and European agencies have approved new drugs that have included ePRO data in the submission dossier but there are many questions around the adoption of the technology that concern the community These include How should instruments developed on paper be adapted for electronic use and what degree of validation should be done between paper and electronic forms How can researchers ensure they are complying with regulatory requirements including the PRO guidance published by FDA in 2009 when using ePRO solutions Can fewer patients be exposed in a clinical trial as a result of improved data quality obtained using electronic diaries What type of solution should be used for certain patient populations and protocols and how can ePRO solutions be designed optimally to increase patient acceptability and compliance Bill Byrom and Brian Tiplady s ePro addresses all these issues reviews the new FDA guidance and provides a very contemporary view on this important subject
