Cabal Seminar 77 - 79 A. S. Kechris, D. A. Martin, Y. N. Moschovakis, 2006-11-15 *Cabal Seminar 77-79* Alain Haraux, Daniel Bauman Henry, 1981 Sets and Extensions in the Twentieth Century, 2012-01-24 Set theory is an autonomous and sophisticated field of mathematics that is extremely successful at analyzing mathematical propositions and gauging their consistency strength It is as a field of mathematics that both proceeds with its own internal questions and is capable of contextualizing over a broad range which makes set theory an intriguing and highly distinctive subject This handbook covers the rich history of scientific turning points in set theory providing fresh insights and points of view Written by leading researchers in the field both this volume and the Handbook as a whole are definitive reference tools for senior undergraduates graduate students and researchers in mathematics the history of philosophy and any discipline such as computer science cognitive psychology and artificial intelligence for whom the historical background of his or her work is a salient consideration Serves as a singular contribution to the intellectual history of the 20th century Contains the latest scholarly discoveries and interpretative insights **Cabal Seminar 77-79** A. S. Kechris, D. A. Martin, Y. N. Moschovakis, 1981 Descriptive Set Theory Yiannis N. Moschovakis, 2025-01-31 Descriptive Set Theory is the study of sets in separable complete metric spaces that can be defined or constructed and so can be expected to have special properties not enjoyed by arbitrary pointsets This subject was started by the French analysts at the turn of the 20th century most prominently Lebesgue and initially was concerned primarily with establishing regularity properties of Borel and Lebesgue measurable functions and analytic coanalytic and projective sets Its rapid development came to a halt in the late 1930s primarily because it bumped against problems which were independent of classical axiomatic set theory The field became very active again in the 1960s with the introduction of strong set theoretic hypotheses and methods from logic especially recursion theory which revolutionized it This monograph develops Descriptive Set Theory systematically from its classical roots to the modern effective theory and the consequences of strong especially determinacy hypotheses The book emphasizes the foundations of the subject and it sets the stage for the dramatic results established since the 1980s relating large cardinals and determinacy or allowing applications of Descriptive Set Theory to classical mathematics The book includes all the necessary background from advanced set theory logic and recursion theory *The Higher Infinite* Akihiro Kanamori, 2003 This is the softcover reprint of the very popular hardcover edition The theory of large cardinals is currently a broad mainstream of modern set theory the main area of investigation for the analysis of the relative consistency of mathematical propositions and possible new axioms for mathematics The first of a projected multi volume series this book provides a comprehensive account of the theory of large cardinals from its beginnings and some of the direct outgrowths leading to the frontiers of contemporary research A oegenetica approach is taken presenting the subject in the context of its historical development With hindsight the consequential avenues are pursued and the most elegant or accessible

expositions given With open questions and speculations provided throughout the reader should not only come to appreciate the scope and coherence of the overall enterprise but also become prepared to pursue research in several specific areas by studying the relevant sections

Set Theory and Its Applications Liljana Babinkostova, 2011 This book consists of several survey and research papers covering a wide range of topics in active areas of set theory and set theoretic topology Some of the articles present for the first time in print knowledge that has been around for several years and known intimately to only a few experts The surveys bring the reader up to date on the latest information in several areas that have been surveyed a decade or more ago Topics covered in the volume include combinatorial and descriptive set theory determinacy iterated forcing Ramsey theory selection principles set theoretic topology and universality among others Graduate students and researchers in logic especially set theory descriptive set theory and set theoretic topology will find this book to be a very valuable reference
