processes Providing an overall system view this innovative textbook explains how those working in the area think about speech Emphasising contextual and environmental perspectives Tatham and Morton lead you through classical and modern phonetics alongside discussion of cognitive and biological aspects of speech In explaining speech production for perception and the relationship between phonology and phonetics this book shows the possible applications such as language teaching clinical practice and speech technology and how these are relevant to other disciplines including sociolinguistics cognitive neuroscience psychology and speech acoustics The Phonetics of Fingerspelling Sherman Wilcox,1992-08-06 We now know that natural signed languages such as American Sign Language French Sign Language British Sign Language and others are fully independent languages But natural signed languages are only one way of conveying language in the visual gestural modality Signed languages also have mechanisms for representing the material of oral languages Fingerspelling is one example of such a representational system This book examines fingerspelling from a phonetic perspective Several studies of the kinematics of fingerspelling articulators are reported From these detailed analyses of articulator timings and velocities conclusions are drawn which suggest that like speech fingerspelling may be explained in terms of coordinative structures and task dynamics The thrust of the book is to explore the notion that signed and spoken languages can be compared not only as abstract linguistic systems but also at the physical level as dynamically structured articulations An implication of these studies is that a common basis in gesture can be found for the production perception and neural organization of signed and spoken languages Sound, Music, and Motion Mitsuko Aramaki,Olivier Derrien,Richard Kronland-Martinet,Sølvi Ystad,2014-12-04 This book constitutes the thoroughly refereed post conference proceedings of the 10th International Symposium on Computer Music Modeling and Retrieval CMMR 2013 held in Marseille France in October 2013 The 38 conference papers presented were carefully reviewed and selected from 94 submissions The chapters reflect the interdisciplinary nature of this conference with following topics augmented musical instruments and gesture recognition music and emotions representation recognition and audience performers studies the art of sonification when auditory cues shape human sensorimotor performance music and sound data mining interactive sound synthesis non stationarity dynamics and mathematical modeling image sound interaction auditory perception and cognitive inspiration and modeling of sound and music computational musicology *Gesture in Embodied Communication and Human Computer Interaction* Stefan Kopp,Ipke Wachsmuth,2010-04-12 The International Gesture Workshops GW are interdisciplinary events for those researching gesture based communication across the disciplines The focus of these events is a shared interest in understanding gestures and sign language in their many facets and using them for advancing human machine interaction Since 1996 International Gesture Workshops have been held roughly every second year with fully reviewed proceedings published by Springer The International Gesture Workshop GW 2009 was hosted by Bielefeld University s Center for Interdisciplinary Research ZiF Zentrum f r interdisziplin re Forschung during February 25 27 2009 Like its predecessors GW
