Coastal Conservation:

Coastal Conservation and Management J. Pat Doody, 2012-12-06 Coastal Conservation and Management provides the reader with a synthesis of the range and variation of the main coastal formations and includes practical guidance on their management The book discusses all the main coastal habitats of importance for nature conservation saltmarsh shingle sand dune and seacliff as well as combinations of these habitats estuaries and other coastal wetlands It offers a comprehensive picture of both the soft sedimentary formations and those which are more resilient While these habitats have all been covered elsewhere in the literature no single volume gives such a wide ranging account An attempt is made throughout to provide the reader with a basic understanding of the importance and range of variation of each habitat and coastal ecosystem The principal issues are discussed and the key management options identified Some prescriptive suggestions are made though for the most part the reader is left to ponder the issues and their possible solutions *Coastal Conservation* Brooke Maslo, Julie L. Lockwood, 2014-03-27 An exploration of the biodiversity status of coastal habitats worldwide emphasising their importance to society major threats and conservation challenges *Coastal Conservation and Management* J. P. Doody, 2001 Coastal Conservation and Management provides the reader with a synthesis of the range and variation of the main coastal formations and includes practical guidance on their management The book discusses all the main coastal habitats of importance for nature conservation saltmarsh shingle sand dune and seacliff as well as combinations of these habitats estuaries and other coastal wetlands It offers a comprehensive picture of both the soft sedimentary formations and those which are more resilient While these habitats have all been covered elsewhere in the literature no single volume gives such a wide ranging account An attempt is made throughout to provide the reader with a basic understanding of the importance and range of variation of each habitat and coastal ecosystem The principal issues are discussed and the key management options identified Some prescriptive suggestions are made though for the most part the reader is left to ponder the issues and their possible solutions The book argues for a more dynamic approach to the conservation of coastal habitats commensurate with the nature of the ecosystems themselves Coastal Conservation and Management also stresses interrelationships with human use By bringing these elements together it highlights the need for new approaches to conservation management which accept that change can be a healing force in the rehabilitation of degraded coastal areas In this context the book brings the geomorphology of coastal systems to the fore suggesting that they may be more robust than is normally suggested In the face of global warming Coastal Conservation and Management also advocates a reappraisal of the value of natural systems as a means of providing a more flexible and efficient response to rising sea levels **Coastal Management** Institution of Civil Engineers (Great Britain), 2000 This volume presents the proceedings of the fourth in a series of highly successful conferences Coastal management issues covered in the volume include planning and implementation economic evaluation the contribution of technology legal and geomorphic impacts and

the increasingly important subjects of managing risk and uncertainty Themes that are of particular interest for the future are discussed including the UK's flood defence aims objectives and targets and the need or otherwise for a European directive for coastal management *Development in Coastal Zones and Disaster Management* Amita Singh, R. Lalitha S.

Fernando, Nivedita P. Haran, 2020-10-13 In the last two decades coastal regions have relatively endured some of the fiercest oceanic and geophysical disasters than the earlier decades Yet disaster management governance fails to match the human nonhuman and environmental calamity which is unfolding in its most frequent and unpredictable pattern Between the Asian Tsunami of 2004 to the devastating Chennai and Kerala floods of 2018 the socio industrial livelihood impact alerts governments towards a greater and more serious compliance to laws for coastal conservation The United Nations Office for Disaster Risk Reduction UNDRR in 2018 had shocking statistics to share as the deaths and damages related to only Tsunami disaster at the coasts to 251 770 and US 280 billions respectively in the last 20 years 1998 2017 as compared to 998 and US 2 7 billion in the previous 20 years 1978 1997 Coastal conservation is no more a question of casual governance but has become a need for survival The region of South Asia which ranks much higher in its vulnerability weak resilience and relatively undersupplied governance structures ought to take this responsibility on a priority The spirit of Hyogu Declaration and the Sendai Framework for Action suggests preparedness and resilience building as key approach areas in coastal governance The book is incomparable in its holistic and transdisciplinary social science based approach to disaster management which links conservation of marine flora and fauna ecosystems and land management with decision making processes and coastal regulations These grass root findings from the subcontinent are substantiated by a section on the most powerful court battle on the Kerala Floods as a guideline for readers to discerningly identify an Act of God often used as a veil to hide lack of preparedness apathy and political greed This book becomes indispensable reading for anyone involved in research administration or any level of decision making for the mitigation and prevention of disasters Oregon Coastal
