Handbook of Psychiatric Measures A. John Rush Jr., Michael B. First, Deborah Blacker, 2009-03-20 The Handbook of Psychiatric Measures offers a concise summary of key evaluations that you can easily incorporate into your daily practice The

measures will enhance the quality of patient care assisting you both in diagnosis and assessment of outcomes. Comprising a wide range of methods available for assessing persons with mental health problems, the Handbook contains more than 275 rating methods from the Abnormal Involuntary Movement Scale to the Zung Self Rating Depression Scale. In this fully revised edition, more than 40 measures have been added both to the book and to the accompanying CD ROM. The Handbook features thoroughly examined and revised measures that provide the most relevant and timely information for clinicians. New measures that empirically provide better patient evaluation. Updated costs, translations, and contact information for each measure. This handy compendium includes both diagnostic tools and measures of symptoms, function, and quality of life, medication side effects, and other clinically relevant parameters. It focuses on measures that can be most readily used in either clinical practice or research. Most of the measures are designed to improve the reliability and validity of patient assessment over what might be accomplished in a standard clinical interview. The measures also demonstrate that the use of formal measures can improve the collection, synthesis, and reporting of information as compared with the use of unstructured examinations. Seventeen disorder-specific chapters, organized in DSM-IV-TR order, include measures for Disorders of childhood and adolescence, Cognitive disorders, Sexual dysfunction, Eating disorders, Sleep disorders, Aggression, and much more. The discussion of each measure includes goals, description, practical issues, psychometric properties, and clinical utility, followed by references and suggested readings. This revised edition includes updated measure descriptions, new measure variants, and research, and newly selected measures particularly appropriate to the domain of discussion. As a clinical tool, this book describes how, when, and to what purpose measures are used. Points out practical issues to consider in choosing a measure for clinical use. Addresses limitations in the use of measures, including ethnic, cultural, and socioeconomic factors that influence their interpretation. Use of this special resource is further enhanced by a CD ROM containing the full text of more than 150 of these measures, an invaluable aid for reference and clinical decision making.

773 valued good enough Study II Overall the results for Cognistat in this study are superior to MMSE and CDT also in combination Cognistat is promising for improved dementia diagnosis in PHC with a quick and easily administered multi domain test for dementia assessments Study III This study presents valuable information about normative MMSE data for the oldest patients Results suggest using the 25th percentile in MMSE of 25 to 26 points and indicate that MMSE 26 is as a reasonable cut off for cognitive decline and further medical evaluation in older persons aged from 85 to 93 years Study IV In summary the additive value of the CAB test in dementia investigations in PHC is not obvious In addition to questionable accuracy the test is quite time consuming and normative values are scarce By introducing the numerical sum CABsum the accuracy was increased Conclusion In conclusion objective cognitive tests are an important part of dementia diagnosis in PHC and there is a need for improved instruments and norm values From our results several cognitive quick tests are usable in PHC MMSE AQT and Cognistat but they have some disadvantages MMSE 26 is a reasonable cut off for cognitive decline in the oldest patients 85 to 93 years from a well educated population with quite good socioeconomic There is a great interest in finding short and better multi domain instruments but the additive value of CAB in dementia investigations in PHC is questionable
