Social cognition is a key area of social psychology which focuses on cognitive processes that are involved when individuals make sense of and navigate in their social world For instance individuals need to understand what they perceive they learn and recall information from memory they form judgments and decisions they communicate with others and they regulate their behavior While all of these topics are also key to other fields of psychological research it's the social world which is dynamic complex and often ambiguous that creates particular demands This accessible book introduces the basic themes within social cognition and asks questions such as How do individuals think and feel about themselves and others How do they make sense of their social environment How do they interact with others in their social world The book is organized along an idealized sequence of social information processing that starts at perceiving and encoding and moves on to learning judging and communicating It covers not only processes internal to the individual but also facets of the environment that

the cultural unconscious In Parts II and III he brings together education with post Jungian and post Freudian psychology examining transference countertransference in the classroom the Jungian idea of the shadow applied to educational processes Jung s unique vision of the symbol and its importance for educational theory and Jung s transcendent function as a prime educational modality Mayes concludes by looking to the future of archetypal pedagogy This groundbreaking work in the emerging field of Jungian pedagogy is invaluable reading in Jungian Studies depth psychological theory educational theory and for teachers and psychotherapists
