

Extra Equipment

Much of the utility of the Jeep is due to the extra equipment which has been designed to adapt it for farming and diversified occupations and industries. The maintenance and use of this equipment is outlined in the following paragraphs.

GOVERNOR.

Three different governors are used as standard in production: the King Seeley, the Novi and the Monarch. These governors are similar in design, being of the centrifugal type which gives precision control of engine speeds. Adjustment, operations and maintenance of each is outlined below.

NOVI GOVERNOR ADJUSTMENT.

First tune the engine to obtain smooth operation.

Check the carburetor bell crank to be sure that the screw indicated in Fig. 33 is correctly installed. Also check the carburetor throttle to make certain that it opens and closes fully. Disconnect the carburetor spring to eliminate any bind or stiffness in the carburetor control linkage. Free operation of the throttle control linkage is essential to avoid surging of the governor in operation. After checking, reconnect the accelerator spring.

The carburetor throttle is connected to the governor operating arm with an adjustable link, No. 9, Fig. 34. The link used on the Novi governor is not spring loaded and is slightly longer than that used on the other type governors. Adjust the length of the connecting link to accurately assemble over the two ball studs when the hand governor control is **PULLED OUT**

FIG. 33—GOVERNOR

to the **last or sixth notch** and the carburetor throttle is **WIDE OPEN**. The adjusted length will be approximately $6\frac{1}{2}$ " (17 cm.) between the ball stud centers.

Start the engine and allow it to run until operating temperature is reached. Set the throttle idle adjusting screw to provide an idle speed of 600 to 650 rpm.

The governed engine speed is controlled by the position of the upper or long governor control arm which is correctly positioned with the adjustable clevis No. 3, Fig. 34.

Pull the governor hand control out to the **FIRST** notch and position the upper arm with the clevis No. 3 to give an engine speed of from 900 to 1000 rpm.

After making this adjustment push the governor hand control all the way in and check the engine idle speed which should be from 600 to 650 rpm as originally set. If the engine runs faster than this speed, loosen the lock nut which holds the governor hand control handle on the dash to the rod and back off the handle until the carburetor idle speed adjusting screw bears on the stop boss. Tighten the lock nut.

In the absence of electrical tachometer equipment, engine speed may be determined by the speedometer. Safely jack up the rear wheels and be sure the front wheel drive is not engaged. When driving the rear wheels in high or direct transmission gear, the speedometer will read from 13½ to 15 miles per hour (22 to 24 Km. h.) at an engine speed of from 900 to 1000 rpm.

FIG. 34—GOVERNOR INSTALLATION AND ADJUSTMENT

NOVI GOVERNOR OPERATION.

The Novi governor is directly belted to the engine—no clutch is provided to disconnect the drive.

To operate the vehicle **WITHOUT** governor control, push the governor hand control all the way **"IN"** against the instrument panel.
