*Catalytic Arylation Methods* Anthony J. Burke, Carolina Silva Marques, 2015      *Catalytic Arylation Methods* Anthony J. Burke, Carolina Silva Marques, 2015-02-09 This hands on approach to the topic of arylation consolidates the body of key research over the last ten years and up to around 2014 on various catalytic methods which involve an arylation process. Clearly structured the chapters in this one stop resource are arranged according to the reaction type and focus on novel efficient and sustainable processes rather than the well known and established cross coupling methods. The entire contents are written by two authors with academic and industrial expertise to ensure consistent coverage of the latest developments in the field as well as industrial applications such as C-H activation, iron and gold catalyzed coupling reactions, cycloadditions or novel methodologies using arylboron reagents. A cross section of relevant tried and tested experimental protocols is included at the end of each chapter for putting into immediate practice along with patent literature. Due to its emphasis on efficient green methods and industrial applications of the products concerned, this interdisciplinary text will be essential reading for synthetic chemists in both academia and industry, especially in medicinal and process chemistry.

**Greener Synthesis of Organic Compounds** Ahindra Nag, 2022-05-30 This book provides an interdisciplinary integrative overview of environmental problem solving using mild reaction conditions, green reagents, waste free and energy efficient synthesis in both industry and academic world. Discussions include a broad integrated perspective on sustainability, integrated risk, multi scale changes and impacts taking place within ecosystems worldwide. Features: This book serves as a reference book for scientific investigators who need to do greener synthesis of organic compounds, drugs and natural products under mild reaction conditions using green reagents, eco friendly catalysts and benign reaction mediums over traditional synthetic processes, which is a key driving force of scientists. Greener synthesis of multiple value added heterocycles opens up a new horizon towards the organic catalysis and for this purpose development of natural resources acts as an effective catalyst. Using environmentally friendly reaction medium e.g. ACC, WETSA, WEBSA have been used for the synthesis of some crucial heterocyclic scaffolds such as bisenols and 2-amino-4H-pyrans, tetraketones, pyrans and biaryls. This book can also be used as a textbook for graduate and post graduate level courses for students. Furthermore, the problems with answers in the book will add better understanding for students.

*Green Approaches in Medicinal Chemistry for Sustainable Drug Design* Bimal Banik, 2024-05-31 Extensive experimentation and high failure rates are a well recognized downside to the drug discovery process with the resultant high levels of inefficiency and waste producing a negative environmental impact. Sustainable and Green Approaches in Medicinal Chemistry 2e reveals how medicinal chemistry can play a direct role in addressing this issue. After providing essential context to the growth of green chemistry in relation to drug discovery, the book goes on to identify a broad range of practical techniques and useful insights revealing how medicinal chemistry techniques can be used to improve efficiency, mitigate failure and increase the environmental benignity of the entire drug discovery process.
