**War and Peace with the Beasts** Brian Griffith, 2020-09-01 The animals that one culture likes are often hated in the next and it seems that the animals themselves know it well Basically one culture's animal partner is often another culture's nightmare from hell Naturally I wonder how relations between people and animals got to be so different around the world How did it happen that some cultures treat bats snakes wolves or ravens as embodiments of evil while other people treat the same animals with affection or even reverence Our wars with the animals go way back Beyond the light cast by our prehistoric campfires the eyes glowing in the night seemed to represent a great hostile force As we began to cultivate crops and husband a few favoured animals we generally regarded other creatures as threats to our chosen few Using the logic of war we sought to maximize the populations of certain creatures and the destruction of others In the past that war effort was our great crusade for the advancement of civilization as we knew it The war had a frontier a front line and an ongoing battle on the home front Expanding outward from our various cradles of civilization we progressively tamed the forests and grasslands converting them to monocrop plantations or pastures Then we had to defend our monocrops from encroaching weeds insects and wild animals In this immediately engaging story and fact filled page turner of a book Brian Griffith looks at the range of ways we relate to animals and the stories we tell about them He asks how we choose whether buddyhood fearful respect businesslike predation or genocidal war is the most appropriate response to each species we meet He watches how our treatment of inferior beings affects our treatment of inferior people and traces some of the chain reactions we unleash when we try to weed out species we don't like Without much hope of making animals fit my personal preferences he writes I wonder how good our relations can get

*The Aesthetics and Affects of Cuteness* Joshua Paul Dale, Joyce Goggin, Julia Leyda, Anthony McIntyre, Diane Negra, 2016-12-08

*Communist Pigs* Thomas Fleischman, 2020-06-30 The pig played a key role in the German Democratic Republic s attempts to create a modern industrial food system built on communist principles By the mid 1980s East Germany produced more pork per capita than West Germany and the UK while also suffering the unintended consequences of manure pollution animal disease and rolling food shortages The pig is a highly adaptive animal and Thomas Fleischman uncovers three types of pig that played roles in this history the industrial pig remade to suit the conditions of factory farming the wild boar whose overpopulation was a side effect of agricultural development and the garden pig reflective of the regime s growing acceptance of private farming within the planned economy Fleischman chronicles East Germany s journey from family farms to factory farms explaining how communist principles shaped the adoption of industrial agriculture practices More broadly Fleischman argues that agriculture under communism came to reflect the practices of capitalist agriculture and that the pork industry provides a clear illustration of this convergence His analysis sheds light on the causes of the country s environmental and political collapse in 1989 and offers a warning about the high cost of cheap food in the present and future *Communist Pigs* was a finalist for the Turku Book Award European Society for Environmental History

**Colonizing Ourselves** José Angel Hernández, 2024-10-15 In the late nineteenth century the Mexican government seeking to fortify its northern borders and curb migration to the United States set out to relocate Mexico Texano families or Tejanos on Mexican land In *Colonizing Ourselves* Jose Angel Herna ndez explores these movements back to Mexico also known as autocolonization as distinct in the history of settler colonization Unlike other settler colonial states that relied heavily on overseas settlers especially from Europe and Asia Mexico received less than 1 percent of these nineteenth century immigrants This reality coupled with the growing migration of farmers and laborers northward toward the United States led ultimately to passage of the 1883 Land and Colonization Law This legislation offered incentives to any Mexican in the United States willing to resettle in the republic Tejanos as well as other Mexican expatriates abroad were to be granted twice the amount of land for settlement that other immigrants received The campaign worked ethnic Mexicans from Texas and the Mexican interior as well as Indigenous peoples from Mexico established numerous colonies on the northern frontier Leading one of the most notable back to Mexico movements was Luis Siliceo a Texan who with a subsidized newspaper *El Colono* and the backing of Porfirio Di az s administration secured a contract to resettle Tejano families across several Mexican states The story of this partnership which Herna ndez traces from the 1890s through the turn of the century provides insight into debates about settler colonization in Mexico Viewed from various global national and regional perspectives it helps to make sense of Mexico s autocolonization policy and its redefinition of Indigenous and settler populations during the nineteenth century

**Conservation Aquaculture** Douglas Tave, 2025-02-11 Stocking hatchery produced fish has been a standard component of fisheries management for over 100 years This book discusses the production of hatchery fish used in aquaculture assisted fisheries programs to help stabilize and recover endangered species For the most part these programs have been unsuccessful and a reason why is that the traditional approach to fish culture produces fish that are genetically and behaviorally ill suited to help recover an imperiled species The hatchery environment and management used to culture the fish makes them sub viable in the wild Even if most of the augmented fish die survivors that mate with wild fish lower the fitness of the endangered population making the conservation program counter productive Since traditional aquaculture programs have been shown to produce fish that are ill suited to help recovery a new way of producing fish is needed That new way is conservation aquaculture In conservation aquaculture fish are raised in naturalized mesocosms that mimic the environment in which the endangered species lives Management is naturalized so domestication does not produce genetic changes and so fish develop a full and effective suite of behaviors that enable them to forage efficiently and detect and avoid predators when stocked The conservation aquaculture management techniques described in the book can also be used to improve commercial and recreational fish stocking programs

*Thomas Pynchon's Animal Tales* Keita Hatooka, 2022-08-29 Throughout his works Thomas Pynchon uses various animal characters to narrate fables that are vital to postmodernism and ecocriticism Thomas Pynchon s *Animal Tales* Fables for Ecocriticism examines case studies of animal representation in

Pynchon's texts such as alligators in the sewer in *V*, the alligator purse in *Bleeding Edge*, dolphins in the Miami Seaquarium in *The Crying of Lot 49*, dodos, pigs and octopuses in *Gravity's Rainbow*, Bigfoot and Godzilla in *Vineland* and *Inherent Vice*, and preternatural dogs and mythical worms in *Mason Dixon* and *Against the Day*. Through this exploration Keita Hatooka illuminates how radically and imaginatively the legendary novelist depicts his empathy for nonhuman beings. Furthermore, by conducting a comparative study of Pynchon's narratives and his contemporary documentarians and thinkers, Thomas Pynchon's *Animal Tales* leads readers to draw great lessons from the fables which stimulate our ecocritical thought for tomorrow.

The Stockholm Paradigm Daniel R. Brooks, Eric P. Hoberg, Walter A. Boeger, 2019-07-16 The contemporary crisis of emerging disease has been a century and a half in the making. Human veterinary and crop health practitioners convinced themselves that disease could be controlled by medicating the sick, vaccinating those at risk, and eradicating the parts of the biosphere responsible for disease transmission. Evolutionary biologists assured themselves that coevolution between pathogens and hosts provided a firewall against disease emergence in new hosts. Most climate scientists made no connection between climate changes and disease. None of these traditional perspectives anticipated the onslaught of emerging infectious diseases confronting humanity today. As this book reveals, a new understanding of the evolution of pathogen-host systems called the Stockholm Paradigm explains what is happening. The planet is a minefield of pathogens with preexisting capacities to infect susceptible but unexposed hosts, needing only the opportunity for contact. Climate change has always been the major catalyst for such new opportunities because it disrupts local ecosystem structure and allows pathogens and hosts to move. Once pathogens expand to new hosts, novel variants may emerge, each with new infection capacities. Mathematical models and real-world examples uniformly support these ideas. Emerging disease is thus one of the greatest climate change-related threats confronting humanity. Even without deadly global catastrophes on the scale of the 1918 Spanish Influenza pandemic, emerging diseases cost humanity more than a trillion dollars per year in treatment and lost productivity. But while time is short, the danger is great, and we are largely unprepared. The Stockholm Paradigm offers hope for managing the crisis. By using the DAMA document assess-monitor-act protocol, we can anticipate, mitigate, emerging disease, buying time and saving money while we search for more effective ways to cope with this challenge.
