Emerging Viruses In Human Populations Volume 16 Perspectives In Medical Virology:

Emerging Viruses in Human Populations Edward Tabor, 2006-12-19 Infectious diseases are an ever present threat to humans In recent years the threat of these emerging viruses has been greater than ever before in human history due in large part to global travel by larger numbers of people and to a lesser extent to disruptions in the interface between developed and undeveloped areas The emergence of new deadly viruses in human populations during recent decades has confirmed this risk They remain the third leading cause of deaths in the US and the second world wide *Emerging Viruses in Human Populations* provides a comprehensive review of viruses that are emerging or that threaten to emerge among human populations in the twenty first century It discusses the apprehension over emerging viruses that has intensified due to concerns about bioterrorism Presents the history of emerging viruses Includes chapters on SARS Pandemic Threat of Avian Influenza Viruses West Nile Virus Monkeypox Virus Hantavirus Nipah Virus and Hendra Virus Japanese Encephalitis Virus Dengue and Crimean Congo Hemorrhagic Fever Viruses Discusses surveillance for newly emerging diseases

Health Management

Krzysztof Smigorski, 2011-12-14 The development in our understanding of health management ensures unprecedented possibilities in terms of explaining the causes of diseases and effective treatment However increased capabilities create new issues Both researchers and clinicians as well as managers of healthcare units face new challenges increasing validity and reliability of clinical trials effectively distributing medical products managing hospitals and clinics flexibly and managing treatment processes efficiently The aim of this book is to present issues relating to health management in a way that would be satisfying for academicians and practitioners It is designed to be a forum for the experts in the thematic area to exchange viewpoints and to present health management s state of art as a scientific and professional domain

Global Warming

Impacts Stefano Casalegno, 2011-10-05 This book addresses the theme of the impacts of global warming on different specific fields ranging from the regional and global economy to agriculture human health urban areas land vegetation marine areas and mangroves Despite the volume of scientific work that has been undertaken in relation to each of each of these issues the study of the impacts of global warming upon them is a relatively recent and unexplored topic The chapters of this book offer a broad overview of potential applications of global warming science As this science continues to evolve confirm and reject study hypotheses it is hoped that this book will stimulate further developments in relation to the impacts of changes in the global climate

Woods,Andrew S. Flies,2019-03-20 Go into partnership with nature she does more than half the work and asks none of the fee Martin H Fisher

Nature has undertaken an immense amount of work throughout evolution. The evolutionary process has provided a power of information that can address key questions such as: Which immune molecules and pathways are conserved across species? Which molecules and pathways are exploited by pathogens to cause disease? What methods can be broadly used or readily adapted for wild immunology? How does co-infection and exposure to a dynamic environment affect immunity? Section 1 addresses these questions through an evolutionary approach. Laboratory mice have been instrumental in dissecting the nuances of the immune system. The first paper investigates the immunology of wild mice and reviews how evolution and ecology sculpt differences in the immune responses of wild mice and laboratory mice. A better understanding of wild immunology is required and sets the scene for the subsequent papers. Although nature doesn't ask for a fee, it is appropriate that nature is repaid in one form or another. The translational theme of the second section incorporates papers that translate wild immunology back to nature. But any non-human non-laboratory mouse research environment is hindered by a lack of research tools; hence the underlying theme throughout the second section: Physiological resource allocation is carefully balanced according to the most important needs of the body. Tissue homeostasis can involve trade-offs between energy requirements of the host and compensatory mechanisms to respond to infection. The third section comprises a collection of papers that employ novel strategies to understand how the immune system is compensated under challenging physiological situations. Technology has provided substantial advances in understanding the immune system at cellular and molecular levels. The specificity of these tools, e.g. monoclonal antibodies, often limits the study to a specific species or strain. A consequence of similar genetic sequences or cross-reactivity is that the technology can be adapted to wild species. Section 4 provides two examples of probing wild immunology by adapting technology developed for laboratory species. *Index*
