Weather radars, wind profilers, and incoherent and coherent scatter radars implementing Doppler techniques are now used routinely both in research and operational applications by scientists and practitioners. This book brings together a collection of eighteen essays by international leading authors devoted to different applications of ground-based Doppler radars. Topics covered include, among others, severe weather surveillance, precipitation estimation, and nowcasting wind and turbulence retrievals, ionospheric radar, and volcanological applications of Doppler radar. The book is ideally suited for graduate students looking for an introduction to the field or professionals intending to refresh or update their knowledge on Doppler radar applications. *Applications of Green's Functions in Science and Engineering* Michael D. Greenberg, 2015-08-19 In addition to coverage of Green's function, this concise introductory treatment examines boundary value problems, generalized functions, eigenfunction expansions, partial differential equations, and acoustics.
