conditions This study examined improvements to the DeltaQ test that account for some of these assumptions using a duct system and building envelope in a test laboratory The laboratory measurements used a purpose built test chamber coupled to a duct system typical of forced air systems in US homes Special duct leaks with controlled air flow were designed and installed into an airtight duct system This test apparatus allowed the systematic variation of the duct and envelope leakage and accurate measurement of the duct leakage flows for comparison to DeltaQ test results This paper will discuss the laboratory test apparatus design construction and operation the various analysis techniques applied to the calculation procedure and present estimates of uncertainty in measured duct leakage

Development of a New Duct Leakage Test ,2001 Duct leakage is a key factor in determining energy losses from forced air heating and cooling systems Several studies Francisco and Palmiter 1997 and 1999 Andrews et al 1998 and Siegel et al 2001 have shown that the duct system efficiency cannot be reliably determined without good estimates of duct leakage Specifically for energy calculations it is the duct leakage air flow to outside at operating conditions that is required Existing test methods either precisely measure the size of leaks but not the flow through them at operating conditions or measure these flows with insufficient accuracy The DeltaQ duct leakage test method was developed to provide improved estimates of duct leakage during system operation In this study we developed the analytical calculation methods and the test procedures used in the DeltaQ test As part of the development process we have estimated uncertainties in the test method both analytically and based on field data and designed automated test procedures to increase accuracy and reduce the contributions of operator errors in performing field tests In addition the test has been evaluated in over 100 houses by several research teams to show that it can be used in a wide range of houses and to aid in finding limits or problems in field applications The test procedure is currently being considered by ASTM as an update of an existing duct leakage standard Fibrous Glass Duct
