Recognising Faces Vicki Bruce, 2017-03-31 Each of us is able to recognise the faces of many hundreds if not thousands of people known to us We recognise faces despite seeing them in different views and with changing expressions From these varying patterns we somehow extract the invariant characteristics of an individual s face and usually remember why a face seems familiar recalling where we know the person from and what they are called In this book originally published in 1988 the author describes the progress which has been made by psychologists towards understanding these perceptual and

cognitive processes and points to theoretical directions which may prove important in the future Though emphasising theory the book also addresses practical problems of eyewitness testimony and discusses the relationship between recognising faces and other aspects of face processing such as perceiving expressions and lipreading The book was aimed primarily at a research audience but would also interest advanced undergraduate students in vision and cognition

The Psychology of Facial Expression James A. Russell, José Miguel Fernández-Dols, 1997-03-28 It reviews current research and provides guidelines for future exploration of facial expression

Darwin and Facial Expression Paul Ekman, 2006 In Darwin and Facial Expression Paul Ekman and a cast of other notable scholars and scientists reconsider the central concepts and key sources of information in Darwin's work on emotional expression First published in 1972 to celebrate the centennial of the publication of Darwin's *The Expression of the Emotions in Man and Animals* Darwin and Facial Expression is the first of three works edited by Dr Ekman and others on the subject This Malor edition contains new and updated references Darwin claimed that we cannot understand human emotional expression without understanding the emotional expressions of animals as our emotional expressions are in large part determined by our evolution Not only are there similarities in the appearance of some emotional expressions between man and certain other animals but the principles that explain why a particular emotional expression occurs with a particular emotion also apply across species

The Human Face Mary Katsikitis, 2012-12-06 James W Pennebaker The University of Texas at Austin At first glance a scientific book on the face doesn't make a great deal of sense After all the face is not a biological unit that falls into a specific medical specialty By the same token it is not part of a of a specific clear functional system that falls within the purview subdiscipline of psychology philosophy sociology or any other traditional area It seems that the only organizing principle of the face is that all humans have one and that it is central to the experience of being human As a social stimulus the face can signal emotions personality sex physical and mental health social status age and aspects of our thoughts intentions and our inner selves At various points in our lives we spend a tremendous amount of time and money for cosmetics cleansers medicines and occasionally surgery to enhance our face In the same way that a normative symmetrical face can attract praise and even adoration damage to the face through birth defects disease or injury is almost always stigmatizing Our faces then are social advertisements for who we are

The Uncanny Valley Hypothesis and Beyond Marcus Cheetham, 2018-05-02 A field of theory and research is evolving around the question highlighted in the Uncanny Valley Hypothesis How does high realism in anthropomorphic design influence human experience and behaviour The Uncanny Valley Hypothesis posits that a very humanlike character or object e.g robot prosthetic limb doll can evoke a negative affective i.e uncanny state Recent advances in robotic and computer graphic technologies in simulating aspects of human appearance behaviour and interaction have been accompanied therefore by theorising and research on the meaning and relevance of the Uncanny Valley Hypothesis for anthropomorphic design Current understanding of the uncanny idea is still

fragmentary and further original research is needed. However, the emerging picture indicates that the relationship between humanlike realism and subjective experience and behaviour may not be as straightforward as the Uncanny Valley Hypothesis suggests. This Research Topic brings together researchers from traditionally separate domains including robotics, computer graphics, cognitive science, psychology, and neuroscience to provide a snapshot of current work in this field. A diversity of issues and questions are addressed in contributions that include original research, review, theory, and opinion papers.

The Nature of Emotion Andrew S. Fox, Regina C. Lapate, Alexander J. Shackman, Richard J. Davidson, 2018-08-23 Building on the legacy of the groundbreaking first edition, the Editors of this unique volume have selected more than 100 leading emotion researchers from around the world and asked them to address 14 fundamental questions about the nature and origins of emotion. For example: What is an emotion? How are emotions organized in the brain? How do emotion and cognition interact? How are emotions embodied in the social world? How and why are emotions communicated? How are emotions physically embodied? What develops in emotional development? At the end of each chapter, the Editors, Andrew Fox, Regina Lapate, Alexander Shackman, and Richard Davidson, highlight key areas of agreement and disagreement. In the final chapter, *The Nature of Emotion: A Research Agenda for the 21st Century*, the Editors outline their own perspective on the most important challenges facing the field today and the most fruitful avenues for future research. Not a textbook offering a single viewpoint, *The Nature of Emotion* reveals the central issues in emotion research and theory in the words of many of the leading scientists working in the field today, from senior researchers to rising stars, providing a unique and highly accessible guide for students, researchers, and clinicians.

Face Recognition Katherine B. Leeland, 2008 Face perception is the process by which the brain and mind understand and interpret the face, particularly the human face. The face is an important site for the identification of others and conveys significant social information. Probably because of the importance of its role in social interaction, psychological processes involved in face perception are known to be present from birth to be complex and to involve large and widely distributed areas in the brain. These parts of the brain can be damaged to cause a specific impairment in understanding faces known as prosopagnosia. This book presents the latest research in the field.

Emotions and the Body Beatrice de Gelder, 2016 *Emotions and the Body* investigates the role that bodies play in the expression and perception of emotions. Using state-of-the-art research in the neuropsychology of emotional face and body disorders, Beatrice de Gelder discusses the neural basis and temporal processing signatures of emotional body language.

The Handbook of Culture & Psychology David Ricky Matsumoto, 2001 This is a review of selected areas and topics within cross-cultural psychology. Emotion in Language Ulrike M. Lütke, 2015-12-16 The miracle of children's language development and the joy of expressive language on the one hand and the vulnerability of language and the sorrow and grief caused by its distortion or even loss in people with aphasia or

dementia on the other hand show us the inseparability of emotion and language in its extremes Although the emotional turn promised a paradigmatic shift from a rationalistic towards an emotion integrating conceptualization of language hardly any interdisciplinary research has focused on the interplay between emotion and language The present book covers the wide range of work on Emotion in Language with contributions from numerous disciplines in the three areas of Theory Research and Application With contributions both from well known pioneers in the area of this topic as well as from young scientists the book offers a broad range of perspectives from linguistics and language development to neurology psychology and developmental neuropsychology and to the fields of philosophy and phenomenology

Functional Accounts of Emotion

James J. Gross, Dacher Keltner, 1999 In recent years emotion researchers have paid increasing attention to the functions that emotions service This attention to function has been apparent in many disciplines and at many levels of analysis From the most basic physiological symptom to the most overarching social structure the effects of emotion both on the emotional person and on others are being recognized The knowledge that has accumulated is substantial but is scattered among a variety of fields and literatures This special issue summarizes the functional approach to emotion The six articles that have been selected concentrate on the work of psychologists but include many of the other fields that have contributed to what is truly a multidisciplinary approach The special issue opens with three foundational articles that discuss a the intrapersonal functions of emotions b the social functions of emotions and c the developmental functions of emotions The next three articles focus on challenges to traditional functional accounts of emotions These articles consider d emotion regulation e emotions and psychopathology and e negative affect and health
