**Conceptual Modeling - ER 2005** Christian Kop, Heinrich C. Mayr, John Mylopoulos, Óscar Pastor, 2005-10-11 Conceptual modeling is fundamental to any domain where one must cope with complex real world situations and systems because it fosters communication between technology experts and those who would benefit from the application of those technologies. Conceptual modeling is the key mechanism for understanding and representing the domains of information system and database engineering but also increasingly for other domains including the new virtual environments and the information systems that support them. The importance of conceptual modeling in software engineering is evidenced by recent interest in model driven architecture and extreme programming. Conceptual modeling also plays a prominent role in various technical disciplines and in the social sciences. The Annual International Conference on Conceptual Modeling referred to as the ER Conference provides a central forum for presenting and discussing current research and applications in which conceptual modeling is the major emphasis. In keeping with this tradition ER 2005 the 24th ER Conference spanned the spectrum of conceptual modeling including research and practice in areas such as theories of concepts and ontologies underlying conceptual modeling methods and tools for developing and communicating conceptual models and techniques for transforming conceptual models into effective information system implementations. Moreover new areas of conceptual modeling including Semantic Web services and the interdependencies of conceptual modeling with knowledge based logical and linguistic theories and approaches were also addressed.

*Semantic Technologies for E-Government* Tomas Vitvar, Vassilios Peristeras, Konstantinos Tarabanis, 2010-01-09 E government faces huge challenges in achieving interoperability and integration taking into account differences in laws regulations services administrative processes and languages across regions and countries. On the other hand issues like service data and process integration have been researched by the Semantic Web community for several years now and in the last two to three years we have witnessed the first applications of semantic technologies in real operational e government systems in both Europe and the US which address exactly these challenges. With this book the editors present the latest research results on how to use semantic technologies in order to improve or even revolutionize the use of ICT in public administration systems. The contributions are organized into three parts architectures and process integration ontologies and interoperability and portals and user interactions. They give a broad overview of how semantic technologies have been applied in different e government projects funded from the European program for ICT Research and Development and they cover a wide spectrum of semantic technologies such as development of domain and service ontologies semantic enhancements of business process models semantic Service Oriented Architectures SOAs based on Semantic Web Services SWS frameworks and ontology based

knowledge management In this volume researchers of Semantic Web technologies will find a wealth of challenging real world scenarios to stimulate new fields of research while developers of e government systems as well as other stakeholders in public administration will appreciate the detailed presentations and discussions of numerous applications in areas such as e government portals personalization of Web based public services or integration and orchestration of public administration processes
