As more and more governments and private companies rely on Internet and Communications Technology (ICT), maintaining information security is becoming of utmost importance. In the pursuit of preventing cyberattacks, many entities have long been embarking on up-to-date technologies and software programs. Governments and commercial organizations have started considering human factors such as user role, knowledge, learning style, and psychological factors in implementing information awareness programs.

Until recently, businesses have relied solely on the process and technologies to address cybersecurity threats without incorporating human factors into their plan. After continuous attacks, companies realized the importance of considering employees' integration with the processes and technologies in effectively addressing security threats (Ki-Aries & Faily, 2017). Integrating workers into security prevention is through implementing information security awareness (ISA) programs. Such programs aim to improve workers' perception of the cyber security risk as credible and teach how to prevent risks (Bada et al., 2019). Hence, ISA aims to teach people to be aware of the potential cyber threats and respond accordingly.

Impact of User Characteristics on Security Awareness and Learning

Prior Knowledge

Another significant human factor impacting individuals' engagement with security awareness (IS) is their general knowledge about IS. Empirical evidence shows that "higher the user's knowledge of fundamental IS applications, the more likely they are aware of security-related issues" (Jaeger, 2018, p. 4705). On the contrary, those who lack knowledge in IS are reluctant to engage in cybersecurity awareness training (Jaeger, 2018). Hence, users' prior knowledge in security awareness-related issues can substantially impact their awareness level and learning.

Reveron, 2012-09-11 In a very short time individuals and companies have harnessed cyberspace to create new industries a vibrant social space and a new economic sphere that are intertwined with our everyday lives At the same time individuals subnational groups and governments are using cyberspace to advance interests through malicious activity Terrorists recruit train and target through the Internet hackers steal data and intelligence services conduct espionage Still the vast majority of cyberspace is civilian space used by individuals businesses and governments for legitimate purposes Cyberspace and National Security brings together scholars policy analysts and information technology executives to examine current and future threats to cyberspace They discuss various approaches to advance and defend national interests contrast the US approach with European Russian and Chinese approaches and offer new ways and means to defend interests in cyberspace and develop offensive capabilities to compete there Policymakers and strategists will find this book to be an invaluable resource in their efforts to ensure national security and answer concerns about future cyberwarfare Essays on Information Security Practices in Organizations Tejaswini Herath, 2008 Organizational employee information security behaviors have received attention in its potential role in cyber security Recently practitioners and academics alike have emphasized the need to evaluate end user computer security behaviors in order to develop more secured information infrastructures This dissertation evaluates the information security behaviors pertaining to employee security policy compliance from three different aspects with the objective of providing guidelines and implications for better design development and implementation of information security policies in

organizations The dissertation consists of three inter related essays following a manuscript based multi essay style thesis format The first essay evaluates the relative importance of the incentive mechanisms This essay develops and tests a theoretical model that enhances our understanding of the incentive effects of penalties pressures and perceived effectiveness in employee compliance to information security policies The findings suggest that security behaviors can be influenced by both intrinsic and extrinsic motivators The results indicate that a intrinsic motivation of employee perceived effectiveness of their actions plays a major role in security policy compliance b pressures exerted by subjective norms and peer behaviors influence the employee behaviors and c certainty of detection is found to influence security behaviors while surprisingly severity of punishment was found to have negative effect on policy compliance intentions In the second essay informed by the literature on Information Security IS adoption protection motivation theory deterrence theory and organizational behavior theories under an umbrella of Taylor Todd s Decomposed Theory of Planned Behavior an integrated Protection Motivation and Deterrence model of security policy compliance is developed The essay also investigates the role of organizational commitment on employee security compliance intentions The results suggest that a perceptions about the severity of breach and response efficacy are likely to affect compliance intentions by shaping attitudes b organizational commitment and social influence have a significant impact on compliance intentions and c resource availability is a significant factor in enhancing self efficacy which in turn is a significant predictor of policy compliance intentions The results indicate that employees in our sample underestimate the probability of security breaches In the third essay we investigate whether the synchronization between management and employee perceptions about security values plays a role in employee security behaviors Much of the information security literature has emphasized the mechanisms such as training and awareness and policy enforcement for creating security conscious environment for better security management However empirical research evaluating the effectiveness of these mechanisms in IT security is almost non existent Moreover researchers have argued that if there is a misalignment between individual and organizational goals there is a greater security threat to information security In this context the third essay explores several aspects of policy compliance in organizations using a dyadic approach In an individual level model we focus on employee perception of security climate and its relation with the policy compliance behavior and the role training and awareness and policy enforcement play in shaping the security climate perceptions of the employees In addition we propose a multi level theoretical framework that considers the role of the management and employee perception alignment on the employee compliance behavior Using a matched responses dataset we empirically assess the two models Our findings suggest that individual employee policy compliance intentions are predicted by their security climate perceptions which in turn were highly associated with the employee perceived training and awareness as well as policy enforcement efforts in their organization In the test of multi level model we found that employee policy compliance intentions are mainly driven by personally held beliefs Multiple surveys were administered to various sample

groups in this research program in order to accomplish the research objectives of the three essays A dyadic investigation approach was undertaken to understand the security policy compliance from a holistic view which resulted in a set of interesting and insightful findings with implications to both theory and practice **Cybersecurity and Artificial**
