

## **SIPM BIOLOGY ESSAY**

### **1. Describe the organisation of the nervous system in humans.**

The organisation of the human nervous system can be divided into two main parts, central nervous system (CNS) and peripheral nervous system (PNS). Central nervous system consists of brain and spinal cord. Brain receives and processes sensory information, initiates responses, stores memories and generates thoughts and emotions. Spinal cord conducts signals to and from the brain and controls reflex actions. Peripheral nervous system consists of peripheral nerves that include spinal nerves (from spinal cord) and cranial nerves (from brain). It connects central nervous system to the rest of the body including muscles, sensory organs and organs of digestive, respiratory, excretory and circulatory systems.

Peripheral nervous system contains sensory or afferent neurones which carry signals to central nervous system from sensory organs and motor or efferent neurones carry signals from central nervous system to effectors, such as organs and muscles. It can be subdivided into somatic nervous system which controls voluntary movements by activating skeletal muscle and autonomic nervous system which controls involuntary responses by influencing heart, smooth muscles and glands. It controlled by medulla and hypothalamus. It consists of sympathetic nervous system (prepares body for stressful or energetic activity/ fight or flight) and parasympathetic nervous system (dominates during maintenance and relaxation activities).
