Nanobioceramics for Bone Tissue Engineering and Regenerative Biomedicine Reza Gholami, Seyed Morteza Naghib, 2025-01-30 This book presents the tunable biological characteristics of nanobioceramics and focuses on some challenges in bone tissue engineering and regenerative medicine. Synthetic composite-based materials and scaffolds should be biodegradable, biocompatible, and supply sufficient structural aid for cell migration along with oxygen waste and nutrient carriage to accelerate bone regeneration process and remodeling in defects. These properties may be reached by functioning tunable physical features including absorption rate, degradation rate, modulus, porosity, and swelling by adjustments with the addition of ceramic phases and copolymers as synthetic composite scaffolds. Synthetic bioceramics seek to imitate the natural hydroxyapatite (HA) crystal creation located in bone. These ceramics, particularly calcium phosphates, have exhibited great osteoinductivity, osteoconductivity, and biocompatibility. Lately, silicon-based glass ceramics have been investigated as a substitution of calcium phosphates. Several members of this collection exhibit high bioactivity, have attractive mechanical strength, and are known to increase cell proliferation, adhesion, and mineralization of extracellular matrix. Moreover, antibacterial properties of some nanostructured bioceramics established significant interests in avoiding implants rejection in surgery and biomedicine.

Nanotechnology and Application of Supercritical Fluids Inamuddin, Abdullah M. Asiri, 2020-07-27 Globalization and industrialization involve a number of reactions products extractions and separations that require the use of organic solvents These solvents are responsible for a number of ecological concerns including atmospheric and land toxicity Conventional organic solvents are regarded as volatile organic compounds some are even limited due to their potential for ozone layer depletion While supercritical liquids exhibit physical properties that could make them ideal substitutes for these volatile compounds there is particular interest in the use of carbon dioxide as a solvent of crude material In particular carbon dioxide has apparent green properties like its noncombustible nature the fact that it is generally nonpoisonous and its relative inertness Thus the use of supercritical carbon dioxide can provide practical improvements to the sustainability of industrial products and processes This book provides in depth literature in the area of industrial green processes focusing on the separation purification and extraction of compounds utilizing supercritical carbon dioxide as a green solvent Biochemical
