Geometry And Algebra In Ancient Civilizations:

Geometry and Algebra in Ancient Civilizations Bartel L. van der Waerden, 2012-12-06 Originally my intention was to write a History of Algebra in two or three volumes In preparing the first volume I saw that in ancient civilizations geometry and algebra cannot well be separated more and more sections on ancient geometry were added Hence the new title of the book Geometry and Algebra in Ancient Civilizations A subsequent volume on the history of modern algebra is in preparation It will deal mainly with field theory Galois theory and theory of groups I want to express my deeply felt gratitude to all those who helped me in shaping this volume In particular I want to thank Donald Blackmore Wagner Berkeley who put at my disposal his English translation of the most interesting parts of the Chinese Nine Chapters of the Art of Arithmetic and of Liu Hui's commentary to this classic and also Jacques Sesiano Geneva who kindly allowed me to use his translation of the recently discovered Arabic text of four books of Diophantos not extant in Greek Warm thanks are also due to Wyllis Bandler Colchester England who read my English text very carefully and suggested several improvements and to Annemarie Fellmann Frankfurt and Erwin Neuenschwan der Zurich who helped me in correcting the proof sheets Miss Fellmann also typed the manuscript and drew the figures I also want to thank the editorial staff and production department of Springer Verlag for their nice cooperation

Encyclopaedia of Mathematics Michiel Hazewinkel, 2013-12-01 This ENCYCLOPAEDIA OF MATHEMATICS aims to be a reference work for all parts of mathematics It is a translation with updates and editorial comments of the Soviet Mathematical Encyclopaedia published by Soviet Encyclopaedia Publishing House in five volumes in 1977 1985 The annotated translation consists of ten volumes including a special index volume There are three kinds of articles in this ENCYCLOPAEDIA First of all there are survey type articles dealing with the various main directions in mathematics where a rather fine subdivision has been used The main requirement for these articles has been that they should give a reasonably complete up to date account of the current state of affairs in these areas and that they should be maximally accessible On the whole these articles should be understandable to mathematics students in their first specialization years to graduates from other mathematical areas and depending on the specific subject to specialists in other domains of science engineers and teachers of mathematics These articles treat their material at a fairly general level and aim to give an idea of the kind of problems techniques and concepts involved in the area in question They also contain background and motivation rather than precise statements of precise theorems with detailed definitions and technical details on how to carry out proofs and constructions The second kind of article of medium length contains more detailed concrete problems results and techniques

Wang, 2012-12-06 The development of polynomial elimination techniques from classical theory to modern algorithms has undergone a tortuous and rugged path This can be observed L van der Waerden s elimination of the elimination theory chapter from from B his classic *Modern Algebra* in later editions A Weil s hope to eliminate from algebraic geometry the last traces of elimination theory and S Abhyankar s suggestion to eliminate the eliminators of elimination theory The renaissance and recognition of polynomial elimination owe much to the advent and advance of modern computing technology based on which effective algorithms are implemented and applied to diverse problems in science and engineering In the last decade both theorists and practitioners have more and more realized the significance and power of elimination methods and their underlying theories Active and extensive research has contributed a great deal of new developments on algorithms and software tools to the subject that have been widely acknowledged Their applications have taken place from

pure and applied mathematics to geometric modeling and robotics and to artificial neural networks This book provides a systematic and uniform treatment of elimination algorithms that compute various zero decompositions for systems of multivariate polynomials The central concepts are triangular sets and systems of different kinds in terms of which the decompositions are represented The prerequisites for the concepts and algorithms are results from basic algebra and some knowledge of algorithmic mathematics
