Urban and Regional Data Management Claire Ellul, Sisi Zlatanova, Massimo Rumor, Robert Laurini, 2013-05-23 The Urban Data Management Society has organised international symposia at various locations throughout Europe since 1971 and UDMS 2013 marks its second visit to London From its outset UDMS has highlighted changes and trends in urban data and urban data management However the rate of emergence of new data and new technologies has never been as rapid as it is now Trends including smart cities smart phones social media 3D modelling volunteered geographic information building information modelling and the internet of things all generate information about the urban environment and the people who live there Additionally the volume of data generated in part through such techniques has in turn resulted in research into big data how best to handle

the data analyse it visualise it in different contexts Thus the challenges and opportunities facing those working with these new types of urban data are manifold Given this the general theme for UDMS 2013 was Recent and Emerging Trends in the Management of New Urban Data This book contains 20 papers selected from the long papers that were submitted for UDMS 2013 Each paper was reviewed by three independent academic reviewers from around the world both for academic quality and for clarity in communication The book is intended to be suitable for different readers from city planners and architects to academics students and policy makers and those involved in urban planning

Geospatial Technologies in Environmental Management Nancy Hoalst-Pullen, Mark W. Patterson, 2010-09-27 Geotechnologies and the Environment Environmental Applications and Management presents an engaging and diverse array of physically oriented GIScience applications that have been organized using four broad themes While the book's themes are by no means mutually exclusive Hoalst Pullen and Patterson provide an elegant overview of the field that frames the collection's subsequent thematic structure Wilderness and Wildlife Response Glaciers Wetlands and Watersheds and Human Health and the Environment Over the course of the volume the contributing authors move beyond basic and in some respects clichéd landscape ecology of land use change to explore human environment dynamics heretofore not emphasized in the applied literature In doing so the collection presents a compelling case for the importance of developing new physically oriented GIScience applications that reside at the nexus of social and natural systems with the explicit intent of informing public policy and/or the decision making practices of resource managers Individually the chapters themselves are intentionally diverse The diversity of the approaches their spatial context and emphases on management applications demonstrate the many ways in which geotechnologies can be used to address small and big problems in both developed and developing regions The collection's internal coherence is derived like the book series from its explicit appeal to a wide variety of human environment interactions with potential policy linkages
