**Geotechnical Engineering for the Preservation of Monuments and Historic Sites III** Renato Lancellotta, Carlo Viggiani, Alessandro Flora, Filomena de Silva, Lucia Mele, 2022-06-15 The conservation of monuments and historic sites is one of the most challenging problems facing modern civilization It involves inextricable patterns factors belonging to different fields cultural humanistic social technical economical administrative and the requirements of safety and use appear to be or often are in conflict with the respect of the integrity of the monuments The complexity of the topic is such that a shared framework of reference is still lacking among art historians architects structural and geotechnical engineers The complexity of the subject is such that a shared frame of reference is still lacking among art historians architects architectural and geotechnical engineers And while there are exemplary cases of an integral approach to each building element with its static and architectural function as a material witness to the culture and construction techniques of the original historical period there are still examples of uncritical reliance on modern technology leading to the substitution from earlier structures to new ones preserving only the iconic look of the original monument Geotechnical Engineering for the Preservation of Monuments and Historic Sites III collects the contributions to the eponymous 3rd International ISSMGE TC301 Symposium Naples Italy 22-24 June 2022 The papers cover a wide range of topics which include Principles of conservation maintenance strategies case histories The knowledge investigations and monitoring Seismic risk site effects soil structure interaction Effects of urban development and tunnelling on built heritage Preservation of diffuse heritage soil instability subsidence environmental damages The present volume aims at geotechnical engineers and academics involved in the preservation of monuments and historic sites worldwide

**Goal Oriented Learning Environments** Horace Moo-Young, Timothy Fortner, 2003 E learning encompasses many things to many people Elliot Massie a leading e learning guru states that Online learning is not about taking a course and putting it on desktop It encompasses Combination of learning services and technology to provide high value integrated learning anytime and anyplace GOLE aims to create a virtual learning simulator that is capable of customizing the pedagogy to the learners learning style To properly design learn by doing scenarios the learning environment must balance the learning objectives with authenticity The key is to build a realistic environment which is complex enough to promote expectation failure and robust enough to support the learner at that point Two of the major learning objectives for a goal oriented learning environment are the application of facts and building specific skills The purpose of this research was to design develop implement and assess a Goal Oriented Learning Environment GOLE into the Civil and Environmental Engineering curriculum at Lehigh University Also to design develop implement and assess Internet based instructional systems into the CEE

curriculum To achieve these objectives a GOLE was implemented into two courses that were used as case studies in this research These case studies describe the instructional design method utilized and the assessment involved to evaluate the courses The instructional design method utilized nine steps Discuss Determine Decide Design Develop Implement Assessment Evaluation and Evolve The designing of GOLE focused on content delivery platform character development and story line In order to assess and evaluate the GOLE a series of five evaluations were created in order perform the analysis skill matrix course performance website evaluations and the DISC profile The data was then analyzed to determine what parts of the course were effective
