Foundation Engineering Handbook Hsai-Yang Fang, 2013-06-29 More than ten years have passed since the first edition was published During that period there have been a substantial number of changes in geotechnical engineering especially in the applications of foundation engineering As the world population increases more land is needed and many soil deposits previously deemed unsuitable for residential housing or other construction projects are now being used Such areas include problematic soil regions mining subsidence areas and sanitary landfills To overcome the problems associated with these natural or man made soil deposits new and improved methods of analysis design and implementation are needed in foundation construction As society develops and living standards rise tall buildings transportation facilities and industrial complexes are increasingly being built Because of the heavy design loads and the complicated environments the traditional design concepts construction materials methods and equipment also need improvement Further recent energy and material shortages have caused additional burdens on the engineering profession and brought about the need to seek alternative or cost saving methods for foundation design and construction

Model Uncertainties in Foundation Design Chong Tang, Kok-Kwang Phoon, 2021-03-16 Model Uncertainties in Foundation Design is unique in the compilation of the largest and the most diverse load test databases to date covering many foundation types shallow foundations spudcans driven piles drilled shafts rock sockets and helical piles and a wide range of ground conditions soil to soft rock All databases with names prefixed by NUS are available upon request

This book presents a comprehensive evaluation of the model factor mean bias and coefficient of variation COV for ultimate and serviceability limit state based on these databases These statistics can be used directly for AASHTO LRFD calibration Besides load test databases performance databases for other geo structures and their model factor statistics are provided Based on this extensive literature survey a practical three tier scheme for classifying the model uncertainty of geo structures according to the model factor mean and COV is proposed This empirically grounded scheme can underpin the calibration of resistance factors as a function of the degree of understanding a concept already adopted in the Canadian Highway Bridge Design Code and being considered for the new draft for Eurocode 7 Part 1 EN 1997 1 202x The helical pile research in Chapter 7 was recognised by the 2020 ASCE Norman Medal
