**Essentials of Economic Decision Analysis for Chemical Engineering** Ralph W. Pike, 2015-03-05 There are things that chemical engineers need to know and things that they need to know about They need to know the time value of money and they need to know about using Solver in Excel for process optimization problems They need to know how to describe a process or plant in a flowsheeting program and they need to know about the options for the thermodynamic packages in the flowsheeting program They need to know how to do material and energy balances on chemical processes and they need to know about how to incorporate rate equations and equilibrium relations in the material and energy balance equations The topics in economic decision analysis given here have details to ensure the depth for need to know and the breadth for the topics that are in the need to know about category The topics follow in order of developing the information needed for economic decision analysis Beginning with market analysis this leads to the decision to evaluate a new process or plant Then several levels of analysis are used to determine cost of manufacturing a new product to compare with the sales estimated from the market analysis Profitability analysis uses the net present value rate of return and the economic price for decisions Total cost assessment used the triple bottom line to incorporate economic environmental and sustainability costs and sustainability credits in the decision analysis The optimal configuration of plants in a chemical production complex was evaluated using global optimization to the determination the best value of triple bottom line Results included using multiobjective optimization to determine Pareto optimal solutions Monte Carlo simulation was used to determine the sensitive of the optimal solution to the parameters in the constraint equations Three appendices are included In Appendix A typical estimating charts are given for individual equipment cost and plant cost for use with quick estimation of total plant costs to be used with total product costs for preliminary estimates of profitability In Appendix B supply and demand elasticity are described with evaluations for corn as a feed and a fuel illustrating the difficulty in finding data to do the evaluation of these frequently used concepts In Appendix C the latest status on global optimization is summarized with the currently more successful algorithms available in GAMS

**The Essential Tversky** Amos Tversky, 2018-07-17 Some of the best and most influential papers by Amos Tversky one of the most brilliant social science thinkers of the twentieth century Amos Tversky

1937-1996 was a towering figure in the cognitive and decision sciences. His work was ingenious, exciting, and influential, spanning topics from intuition to statistics to behavioral economics. His long and extraordinarily productive collaboration with his friend and colleague Daniel Kahneman was the subject of Michael Lewis's best-selling book *The Undoing Project: A Friendship that Changed Our Minds*. The *Essential Tversky* offers a selection of Tversky's best, most influential and accessible papers, classics chosen to capture the essence of Tversky's thought. The impact of Tversky's work is far-reaching and long-lasting. In 2002, Kahneman, who drew on their joint work in his much-praised 2013 book *Thinking Fast and Slow* and who contributes an afterword to this collection, was awarded the Nobel Prize in Economics for work done with Tversky. In *The Undoing Project*, Lewis, who contributes a foreword to this collection, describes his discovery that Tversky and Kahneman's thinking laid the foundation for *Moneyball*, his own ode to number crunching. The papers collected in *The Essential Tversky* cover topics that include cognitive and perceptual bias, misguided beliefs, inconsistent preferences, risky choice, and loss aversion decisions and psychological common sense. Together, they offer nonspecialist readers an introduction to one of the most brilliant social science thinkers of the twentieth century.

**Tools for Making Acute Risk Decisions** CCPS (Center for Chemical Process Safety), 2010-09-14. The complexity of today's risk decisions is well known. Beyond cost and risk, there are many other factors contributing to these decisions, including type of risk such as human injury or fatality, the economic impact on the local community, profitability, availability of capital, alternatives for reducing or eliminating the risk, costs of implementing alternatives, codes, standards, regulation, and good industry practice. This book presents a large range of decision aids for risk analysts and decision makers in industry so that vital decisions can be made in a more consistent, logical, and rigorous manner. Though primarily aimed at the process industry, this book can be used by anyone who makes similar decisions in other industries, including those in management science.
