**geometrics** a new way to crochet.  
Gather your crochet hook and some colorful balls of yarn, and get ready to have fun with simple geometry. *Geometrics* explores these concepts through crochet: the golden ratio, the Fibonacci sequence and dragon curves. These ideas have guided artists like Da Vinci and Michelangelo for centuries. Try them for your next project!

*Geometric And Algebraic Topological Methods In Quantum Mechanics* Luigi Mangiarotti, Gennadi A Sardanashvily, Giovanni Giachetta, 2005-01-27 In the last decade the development of new ideas in quantum theory including geometric and deformation quantization the non Abelian Berry's geometric factor super and BRST symmetries non commutativity has called into play the geometric techniques based on the deep interplay between algebra differential geometry and topology The book aims at being a guide to advanced differential geometric and topological methods in quantum mechanics Their main peculiarity lies in the fact that geometry in quantum theory speaks mainly the algebraic language of rings modules sheaves and categories Geometry is by no means the primary scope of the book but it underlies many ideas in modern quantum physics and provides the most advanced schemes of quantization

**Geometric and Topological Methods for Quantum Field Theory** Sylvie Paycha, Bernardo Uribe, 2007 This volume based on lectures and short communications at a summer school in Villa de Leyva Colombia July 2005 offers an introduction to some recent developments in several active topics at the interface between geometry topology and quantum field theory It is aimed at graduate students in physics or mathematics who might want insight in the following topics covered in five survey lectures Anomalies and noncommutative geometry Deformation quantisation and Poisson algebras Topological quantum field theory and orbifolds These lectures are followed by nine articles on various topics at the borderline of mathematics and physics ranging from quasicrystals to invariant instantons through black holes and involving a number of mathematical tools borrowed from geometry algebra and analysis

neither neatly located in one domain nor the other this book is concerned with other ways of doing architecture It examines architecture at the limits where it is muddled by alternative disciplinary influences whether art practice philosophy or literature Frichot meets a range of creative characters who work at the peripheries and who challenge the central assumptions of the discipline showing that there is no core of architecture there is rather architecture as a multiplicity of diverse concerns in engagement with local environments and worlds From an author well known in the disciplines of architecture and philosophy for her scholarship on Deleuze this is a radical accessible and highly original approach to design research deftly engaging with an array of current topics from the Anthropocene to affect theory new materialism to contemporary feminism
