Uncertainty, Modeling, and Decision Making in Geotechnics Kok-Kwang Phoon,Takayuki Shuku,Jianye Ching,2023-12-11 Uncertainty Modeling and Decision Making in Geotechnics shows how uncertainty quantification and numerical modeling can complement each other to enhance decision making in geotechnical practice filling a critical gap in guiding practitioners to address uncertainties directly The book helps practitioners acquire a working knowledge of geotechnical risk and reliability methods and guides them to use these methods wisely in conjunction with data

and numerical modeling In particular it provides guidance on the selection of realistic statistics and a cost effective accessible method to address different design objectives and for different problem settings and illustrates the value of this to decision making using realistic examples Bringing together statistical characterization reliability analysis reliability based design probabilistic inverse analysis and physical insights drawn from case studies this reference guide from an international team of experts offers an excellent resource for state of the practice uncertainty informed geotechnical design for specialist practitioners and the research community

Risk and Reliability in Geotechnical Engineering Kok-Kwang Phoon,Jianye Ching,2018-10-09 Establishes Geotechnical Reliability as Fundamentally Distinct from Structural Reliability Reliability based design is relatively well established in structural design Its use is less mature in geotechnical design but there is a steady progression towards reliability based design as seen in the inclusion of a new Annex D on Reliability of Geotechnical Structures in the third edition of ISO 2394 Reliability based design can be viewed as a simplified form of risk based design where different consequences of failure are implicitly covered by the adoption of different target reliability indices Explicit risk management methodologies are required for large geotechnical systems where soil and loading conditions are too varied to be conveniently slotted into a few reliability classes typically three and an associated simple discrete tier of target reliability indices Provides Realistic Practical Guidance Risk and Reliability in Geotechnical Engineering makes these reliability and risk methodologies more accessible to practitioners and researchers by presenting soil statistics which are necessary inputs by explaining how calculations can be carried out using simple tools and by presenting illustrative or actual examples showcasing the benefits and limitations of these methodologies With contributions from a broad international group of authors this text Presents probabilistic models suited for soil parameters Provides easy to use Excel based methods for reliability analysis Connects reliability analysis to design codes including LRFD and Eurocode 7 Maximizes value of information using Bayesian updating Contains efficient reliability analysis methods Accessible To a Wide Audience Risk and Reliability in Geotechnical Engineering presents all the need to know information for a non specialist to calculate and interpret the reliability index and risk of geotechnical structures in a realistic and robust way It suits engineers researchers and students who are interested in the practical outcomes of reliability and risk analyses without going into the intricacies of the underlying mathematical theories

Databases for Data-Centric Geotechnics Chong Tang,Kok-Kwang Phoon,2024-12-20 Databases for Data Centric Geotechnics forms a definitive reference and guide to databases in geotechnical and rock engineering to enhance decision making in geotechnical practice using data driven methods This second volume pertains to geotechnical structures The opening chapter presents a substantial survey of performance databases and the effectiveness of our prediction models in matching the field measurements in these databases based on 1 full scale field tests 2 39 prediction exercises organized as a part of international conferences and 3 comparison between numerical analyses and in situ or field measurements conducted by the French LCPC The focus is on the evaluation of the statistical degree of confidence in

predicting various of quantities of interest such as capacity and deformation The following 18 chapters then present databases on the performance of shallow foundations spudcan foundations deep foundations anchors and pipelines retaining systems and excavations and landslides The databases were compiled from studies undertaken in many countries such as Australia Belgium Bolivia Brazil Canada China Egypt France Germany Hungary Iran Ireland Japan Kenya Malaysia Netherlands Norway Poland Portugal South Africa the United Kingdom and the United States This volume on geotechnical structures is a companion to the volume on site characterization Databases for Data Centric Geotechnics represents the most diverse and comprehensive assembly of database research in a single publication consisting of two volumes to date It follows from Model Uncertainties for Foundation Design also published by CRC Press and suits specialist geotechnical engineers researchers and graduate students Chapter 10 of this book is freely available as a downloadable Open Access PDF at <http://www.taylorfrancis.com> under a Creative Commons Attribution CC BY 4.0 license
