Geosynthetics in Filtration, Drainage and Erosion Control R.M. Koerner, 2013-10-22 Geosynthetics can and have played a pivotal role in providing the primary functions of filtration drainage and erosion control Within each category this book counterpoints the design testing and performance of the various materials against one another The facilitation of filtration by a number of different woven and non woven geotextiles is discussed Design is centred around a balance between open voids for adequate permeability and closed voids for proper soil retention This balance is compromised by long term clogging or soil loss from either the upstream soil particles or by the nature of the permeating fluid This is a major focal area of the book One solution to excessive filter clogging is to open up the geotextile s voids and allow sediments and micro organisms in the permeating fluid to pass through The challenge then becomes the design and potential clogging of the drain The drainage aspect of geosynthetics is the second focal area Erosion control is closely related to both filtration and drainage The tremendous design problems and equally large repair problems on all types of facilities are addressed Highway slopes earth dams landfill covers and solid waste daily covers are a few common situations

The Manual of Below-Grade Waterproofing Systems Justin Henshell, 2000 As the arsenal of weapons against leakage has grown so has confusion among architects and engineers attempting to select the best below grade waterproofing systems and materials Manufacturers literature offers little assistance during the selection process as well as being biased in favor of a particular product The first guide devoted exclusively to the subject The Manual of Below Grade Waterproofing Systems picks up where manufacturers manuals leave off Written by an architect with more than twenty years of experience designing habitable underground spaces it provides frank unbiased appraisals of various waterproofing materials and

systems This manual presents architects and engineers with expert guidance on selecting designing with and specifying waterproofing materials and systems Justin Henshell walks you step by step through the entire waterproofing process from determining waterproofing needs to selecting and specifying waterproofing systems to preparing detailed drawings for construction documents And throughout he offers architectural details which illustrate general design principles as well as high quality photographs of waterproofing failures that help you to more clearly comprehend common design errors and problems associated with various waterproofing materials The Manual of Below Grade Waterproofing Systems is an indispensable working resource for architects civil engineers contractors specifiers materials manufacturers landscape architects and all other professionals involved with the design and construction of habitable underground spaces
