## **Geothermal Reservoir Engineering Geothermal Reservoir Engineering:**

**Geothermal Reservoir Engineering** Malcolm Alister Grant, Paul F Bixley, 2011-04-01 As nations alike struggle to diversify and secure their power portfolios geothermal energy the essentially limitless heat emanating from the earth itself is being harnessed at an unprecedented rate For the last 25 years engineers around the world tasked with taming this raw power have used Geothermal Reservoir Engineering as both a training manual and a professional reference This long awaited second edition of Geothermal Reservoir Engineering is a practical guide to the issues and tasks geothermal engineers encounter in the course of their daily jobs The book focuses particularly on the evaluation of potential sites and provides detailed guidance on the field management of the power plants built on them With over 100 pages of new material informed by the breakthroughs of the last 25 years Geothermal Reservoir Engineering remains the only training tool and professional reference dedicated to advising both new and experienced geothermal reservoir engineers The only resource available to help geothermal professionals make smart choices in field site selection and reservoir management Practical focus eschews theory and basics getting right to the heart of the important issues encountered in the field Updates include coverage of advances in EGS enhanced geothermal systems well stimulation well modeling extensive field histories and preparing data for reservoir simulation Case studies provide cautionary tales and best practices that can only be imparted by a seasoned expert

Stanford Geothermal Program, [Geothermal Reservoir Engineering](#), 1986 **Third Workshop on Geothermal Reservoir Engineering**, 1977 The Third Workshop on Geothermal Reservoir Engineering convened at Stanford University on December 14 1977 with 104 attendees from six nations In keeping with the recommendations expressed by the participants at the Second Workshop the format of the Workshop was retained with three days of technical sessions devoted to reservoir physics well and reservoir testing field development and mathematical modeling of geothermal reservoirs The program presented 33 technical papers summaries of which are included in these Proceedings Although the format of the Workshop has remained constant it is clear from a perusal of the Table of Contents that considerable advances have occurred in all phases of geothermal reservoir engineering over the past three years Greater understanding of reservoir physics and mathematical representations of vapor dominated and liquid dominated reservoirs are evident new techniques

for their analysis are being developed and significant field data from a number of newer reservoirs are analyzed The objectives of these workshops have been to bring together researchers active in the various physical and mathematical disciplines comprising the field of geothermal reservoir engineering to give the participants a forum for review of progress and exchange of new ideas in this rapidly developing field and to summarize the effective state of the art of geothermal reservoir engineering in a form readily useful to the many government and private agencies involved in the development of geothermal energy To these objectives the Third Workshop and these Proceedings have been successfully directed Several important events in this field have occurred since the Second Workshop in December 1976 The first among these was the incorporation of the Energy Research and Development Administration ERDA into the newly formed Department of Energy DOE which continues as the leading Federal agency in geothermal reservoir engineering research The Third Workshop under the Stanford Geothermal Program was supported by a grant from DOE through a subcontract with the Lawrence Berkeley Laboratory of the University of California A second significant event was the first conference under the ERDA DOE ENEL cooperative program where many of the results of well testing in both nations were discussed The Proceedings of that conference should be an important contribution to the literature These Proceedings of the Third Workshop should also make an important contribution to the literature on geothermal reservoir engineering Much of the data presented at the Workshop were given for the first time and full technical papers on these subjects will appear in the professional journals The results of these studies will assist markedly in developing the research programs to be supported by the Federal agencies and in reducing the costs of research for individual developers and utilities It is expected that future workshops of the Stanford Geothermal Program will be as successful as this third one Planning and execution of the Workshop see file ljd 10 3 2005 The Program Committee recommended two novel sessions for the Third Workshop both of which were included in the program The first was the three overviews given at the Workshop by George Pinder Princeton on the Academic aspect James Bresee DOE DGE on the Government aspect and Charles Morris Phillips Petroleum on the Industry aspect These constituted the invited slate of presentations from the several sectors of the geothermal community The Program Committee acknowledges their contributions with gratitude Recognition of the importance of reservoir assurance in opting for geothermal resources as an alternate energy source for electric energy generation resulted in a Panel Session on Various Definitions of Geothermal Reservoirs Special acknowledgments are offered to Jack Howard and Werner Schwarz LBL and to Jack Howard as moderator to the panelists James Leigh Lloyd s Bank of California Stephen Lipman Union Oil Mark Mathisen PG and to the rapporteurs George Frye Aminoil Vasel Roberts Electrical Power Research Institute and Alexander Graf LBL whose Valuable summaries are included in the Proceedings Special thanks are also due Roland Horne Visiting Professor from New Zealand and Program Manager of the Stanford Geothermal Program for his efforts with the Program graduate students in conducting the Workshop Further thanks go to Marion Wachtel who in spite of tremendous personal hardship administered the Workshop
