Raydugin,2020-07-16 Project practitioners and decision makers complain that both parametric and Monte Carlo methods fail to produce accurate project duration and cost contingencies in majority of cases Apparently the referred methods have unacceptably high systematic errors as they miss out critically important components of project risk exposure In the case of complex projects overlooked are the components associated with structural and delivery complexity Modern Risk Quantification in Complex Projects Non linear Monte Carlo and System Dynamics Methodologies zeroes in on most crucial but systematically overlooked characteristics of complex projects Any

mismatches between two fundamental interacting subsystems a project structure subsystem and a project delivery subsystem result in non linear interactions of project risks Three kinds of the interactions are distinguished internal risk amplifications stemming from long term chronic project system issues knock on interactions and risk compounding Affinities of interacting risks compose dynamic risk patterns supported by a project system A methodology to factor the patterns into Monte Carlo modelling referred to as non linear Monte Carlo schedule and cost risk analysis N SCRA is developed and demonstrated It is capable to forecast project outcomes with high accuracy even in the case of most complex and difficult projects including notorious projects outliers it has a much lower systematic error The power of project system dynamics is uncovered It can be adopted as an accurate risk quantification methodology in complex projects Results produced by the system dynamics and the non linear Monte Carlo methodologies are well aligned All built Monte Carlo and system dynamics models are available on the book s companion website
