Sports Neurology, 2018-11-24 Sports Neurology is designed to be a comprehensive overview of neurology within the context of sports medicine This definitive text addresses the history of sports neurology including its unique role within sports medicine and provides a detailed assessment of central and peripheral nervous system injuries and illnesses in athletes Sports Neurology is a critical companion for all sports medicine clinicians and for neurologists who manage athletes Provides an introduction and overview of concussion in sport discussing the epidemiology biomechanics and pathophysiology of concussion as well as considerations for sideline evaluation and emergency room diagnosis and management Explores the long term consequences of concussion and repetitive head impacts and the relationship with neurodegeneration Offers an overview of mild moderate and severe brain injury classification compares moderate and severe traumatic brain injury within the context of civilian military and sports circumstances Describes key issues for the evaluation and treatment of cervical spinal cord injuries peripheral nerve injuries and sports related pain Provides an overview of neuroepidemiology and the importance of obtaining meaningful sport related neuroepidemiologic data that will ultimately provide the foundation for making data driven decisions for central and peripheral nervous system injuries in sport *Towards a New Cognitive Neuroscience: Modeling Natural Brain Dynamics* Klaus Gramann,Tzyy-Ping Jung,Daniel P. Ferris,Chin-Teng Lin,Scott Makeig,2014-10-03 Decades of brain imaging experiments have revealed important insights into the architecture of the human brain and the detailed anatomic basis for the neural dynamics supporting human cognition However technical restrictions of traditional brain imaging approaches including functional magnetic resonance tomography fMRI positron emission tomography PET and magnetoencephalography MEG severely limit participants movements during experiments As a consequence our knowledge of the neural basis of human cognition is rooted in a dissociation of human cognition from what is arguably its foremost and certainly its evolutionarily most determinant function organizing our behavior so as to optimize its consequences in our complex multi scale and ever changing environment The concept of natural cognition therefore should not be separated from our fundamental experience and role as embodied agents acting in a complex partly unpredictable world To gain new insights into the brain dynamics supporting natural cognition we must overcome restrictions of traditional brain imaging technology First the sensors used must be lightweight and mobile to allow monitoring of brain activity during free participant movements New hardware technology for electroencephalography EEG and near infrared spectroscopy NIRS allows recording electrical and hemodynamic brain activity while participants are freely moving New data driven analysis approaches must allow separation of signals arriving at the sensors from the brain and from non brain sources neck muscles eyes heart the electrical environment etc Independent component analysis ICA and related blind source separation methods allow separation of brain activity from non brain activity from data recorded during experimental paradigms that stimulate natural cognition Imaging the precisely timed distributed brain dynamics that support

all forms of our motivated actions and interactions in both laboratory and real world settings requires new modes of data capture and of data processing Synchronously recording participants motor behavior brain activity and other physiology as well as their physical environment and external events may be termed mobile brain body imaging MoBI Joint multi stream analysis of recorded MoBI data is a major conceptual mathematical and data processing challenge This Research Topic is one result of the first international MoBI meeting in Delmenhorst Germany in September 2013 During an intense workshop researchers from all over the world presented their projects and discussed new technological developments and challenges of this new imaging approach Several of the presentations are compiled in this Research Topic that we hope may inspire new research using the MoBI paradigm to investigate natural cognition by recording and analyzing the brain dynamics and behavior of participants performing a wide range of naturally motivated actions and interactions

Translation and Processing of Light by the Non-Image Forming Visual System - Context, Mechanisms and Applications Fabian-Xosé Fernandez,Shadab Rahman,Manuel Spitschan,2021-10-18

Visual and Non-Visual Effects of Light Agnieszka Wolska,Dariusz Sawicki,Małgorzata Tafil-Klawe,2020-07-29 The introduction of artificial lighting extends the time of wakefulness after dark and enables work at night thus disturbing the human circadian rhythm The understanding of the physiological mechanisms of visual and non visual systems may be important for the development and use of proper light infrastructure and light interventions for different workplace settings especially for shift work conditions Visual and Non Visual Effects of Light Working Environment and Well Being presents the impact of lighting in the working environment on human health well being and visual performance The physiological explanation of the visual and non visual effects of light on humans which discusses the biological bases of image and non image forming vision at the cellular level may be of particular interest to any professional in the field of medicine physiology and biology It is one of the intentions of this book to put forward some recommendations and examples of lighting design which take into account both the visual and non visual

effects of light on humans These may be of particular interest to any professional in the field of lighting occupational safety and health and interior design What effects on health can a light overdose or light deficiency have What is bad light The authors of the monograph provide answers to these questions Just as for a physicist the dual nature of light comprises an electromagnetic wave and a photon the duality of light for a physician comprises visual and non visual effects Prof Jacek Przybylski Medical University of Warsaw This is a unique publication in the field of lighting technology The authors have skillfully combined both the technical and biomedical aspects involved which is unprecedented in the literature available As a result an important study has been created for many professional groups with a significant impact on the assessment of risks associated with LED sources Prof Andrzej Zaj c Military University of Technology Warsaw On Human Nature Jonathan H. Turner,2020-11-24 In this book Jonathan H Turner combines sociology evolutionary biology cladistic analysis from biology and comparative neuroanatomy to examine human nature as inherited from common ancestors shared by humans and present day great apes Selection pressures altered this inherited legacy for the ancestors of humans termed hominins for being bipedal and forced greater organization than extant great apes when the hominins moved into open country terrestrial habitats The effects of these selection pressures increased hominin ancestors emotional capacities through greater social and group orientation This shift in turn enabled further selection for a larger brain articulated speech and culture along the human line Turner elaborates human nature as a series of overlapping complexes that are the outcome of the inherited legacy of great apes being fed through the transforming effects of a larger brain speech and culture These complexes he shows can be understood as the cognitive complex the psychological complex the emotions complex the interaction complex and the community complex **Stroke, Part II: Clinical Manifestations and Pathogenesis** Marc Fisher,2008-12-30 This volume provides a comprehensive guide to the manifestations and pathogenesis involved with stroke including advancements in research and a newfound understanding of the biochemical background of this cerebrovascular disorder This intensive handbook is meant to give clinicians a source reference that will enable them to gain a thorough knowledge and understanding of the clinical features and management of the many neurological manifestations of stroke disorder In addition practitioners clinicians and researchers will gain a better understanding of highly studied topics including amongst others the medical complications associated with stroke chapters on anterior circulation and hemorrhagic stroke syndromes stroke related psychiatric disorders and other rare causes of stroke disorder Probing Brain-Behavior Relationship with Multimodal Imaging: Methods and Clinical Applications Bin Jing,Yingying Tang,Yoonmi Hong,Ye Wu,2024-04-10 Nowadays exploring the brain behavior relationship via MRI EEG fNIRS and MEG has become a research hotspot further accelerated by the emergence of large sample open source datasets such as UK Biobank Human Connectome Project the Adolescent Brain Cognitive Development the National Institute of Mental Health NIMH Intramural Healthy Volunteer Dataset the TUH EEG CORPUS and many other multimodal datasets Many prior studies have conducted various prediction tasks in different

populations from infants to adults from healthy subjects to patients with miscellaneous imaging modalities however to construct a precise generalizable and reproducible brain behavior relationship is still facing many challenges for example individual variability multi site heterogeneity imaging result interpretability model generalization low prediction performance and lack of clinical applications
