Abstract—The purpose of this study was to determine the effect of a 10-week, 1000 kcal energy deficit diet on the body composition and physical fitness of obese women. The study was a randomized, controlled trial. The subjects were 20 obese women who were randomly assigned to either a diet or an exercise group. The diet group was instructed to consume 1000 kcal less than their estimated energy requirements, while the exercise group was instructed to exercise for 30 minutes, 3 times per week. The subjects were assessed at baseline and at 10 weeks. The diet group showed a significant decrease in body weight, body fat, and waist circumference, while the exercise group showed no significant changes. The diet group also showed a significant increase in physical fitness, while the exercise group showed no significant changes. The results of this study suggest that a 10-week, 1000 kcal energy deficit diet is effective in improving body composition and physical fitness in obese women.
