Modern Optics B. D. Guenther, 2015 The most up to date treatment available on modern optics The text gives an overview of the topics and an introduction to design practices for a number of applications It provides the student with the foundations to enter into advanced courses in nonlinear optics lens design laser system design and optical communications *Modern Optics Simplified* B. D. Guenther, 2019-09-18 This textbook reduces the complexity of the coverage of optics to allow a student with only elementary calculus to learn the principles of optics and the modern Fourier theory of diffraction and imaging Students majoring in sciences or engineering and taking a standard physics course on optics will find this text useful Examples of a variety of applications dependent on optics allow the student to connect this course to their particular field of interest Topics covered include aberrations with experimental examples correction of chromatic aberration explanation of coherence and the use of interference theory to design an antireflection coating Fourier transform optics and its application to diffraction and imaging use of Gaussian wave theory and fiber optics make the text of interest to those in electrical and bioengineering as well as physics and medical science The text includes hundreds of photos figures and diagrams to provide readers with strong visual insights into optics More difficult optional topics are highlighted throughout and the need for experience with differential equations and extensive use of vector theory are avoided by using a one dimensional theory where possible Maxwell's equations are introduced only to determine the properties of a light wave and the boundary conditions are introduced to characterize reflection and refraction Most discussion is limited to reflection The book also introduces Fourier transforms as they are needed in the discussion of diffraction and imaging Modern Optics, 2024
