Grant F. C. Gillard,2012-12-24 Want to start keeping honey bees If you are struggling to get started in beekeeping you know it costs a ton of money to buy all the

equipment Shipping charges are increasing every year Costs continue to go up Bees in certain times during the season are in short supply But during the spring you can line up to acquire your bees for free Yes the bees are free but there will always be a cost in terms of your time and motivation But the good news is those costs are relative And the GREAT news is that you can catch swarms of free bees without incurring the out of pocket cash costs of buying a package of bees or a nuc You can catch free bees to replace winter dead outs You can catch free bees to expand your apiary You can catch free bees to increase the number of locations where you keep bees or even expand your hives to start a pollination service In a nutshell you don't have to buy bees and incur the out of pocket expenses that hold a lot of hopeful people back from enjoying a wonderful hobby that holds tremendous business potentials If that's enough information I encourage you to order this book If you're just mildly curious keep reading Like a lot of people we usually have more time than money and the bees are out there for the expense of our time I've been keeping honey bees since 1981 This book is about my experiences finding catching and keeping free bees With this book and the information within you'll likewise be able to position yourself to receive free bees and save a bunch of money Or at least you won't have to shell out those hard earned dollars to buy bees And as you peruse this manuscript let me give you some great news never before have there been so many opportunities for free bees First the horror stories coming out of the southern United States with respect to Africanized or killer bees has the general public on high alert The fear of honeybees ANY honeybee is at an all time high though I think this fear is rather senseless and irrational When people see bees they want someone else to deal with them and deal with them NOW And every time I rescue a swarm I'm bombarded with questions Are those the killer bees Second with the loss of honeybees to Colony Collapse Disorder or CCD for short never has there been a time when people do not want to kill honeybees They believe there is a shortage of honeybees a debatable topic skewed by selective reporting from our news media They want to give the honeybee every opportunity to survive But not in their backyard And this is kind of a paradoxical irony They don't want to kill the bees but they don't want them around The bottom line comes to the reality that the general public is looking for people beekeepers like you and me to come remove and retrieve honeybees and take them away Never before has the opportunity for beekeepers been greater than now The general public goes crazy when they find a swarm of honeybees and they'll make fifteen phone calls looking for someone to take the bees off their hands It would be easier to kill the bees but there is a new thread woven into the public consciousness that recognizes it's just wrong to do so The result is more people in the general population are looking for specialized people beekeepers like you and me to come and get rid of their bees People hail you as a hero I like doing this because I get free bees out of the deal This manuscript is about finding those opportunities so people call you You can acquire a bunch of free bees with a little effort and a little time I have done this and I'll show you how you can too There are many ways to collect free bees and ultimately you'll have to choose the method that works best for you I'll explain all those details in this book

**Letters from the Hive** Stephen Buchmann, Banning Repplier, 2006-05-30 They work

hard are devoted to family love sex and know the importance of a good piece of real estate Honey bees and the daily workings of their close knit colonies are one of nature s great miracles And they produce one of nature s greatest edible bounties honey More than just a palate pleaser honey was once an offering to the gods a preservative and a medicine whose sought after curative powers were detailed in ancient texts and are being rediscovered by modern medical science In Letters from the Hive Prof Stephen Buchmann takes us into the hive nursery honey factory queen s inner sanctum and out to the world of backyard gardens open fields and deserts in full bloom where the age old sexual dance between flowers and bees makes life on earth as we know it possible Hailed for their hard work harmonious society and mistakenly for their celibacy bees have a link to our species that goes beyond biology In Letters from the Hive Buchmann explores the fascinating role of bees in human culture and mythology following the honey hunters of native cultures in Malaysia the Himalayas and the Australian Outback as they risk life and limb to locate a treasure as valuable as any gold To contemplate a world without bees is to imagine a desolate place culturally and biologically and Buchmann shows how with each acre of land sacrificed to plow parking lot or shopping mall we inch closer to what could become a chilling reality He also offers honey based recipes cooking tips and home remedies further evidence of the gifts these creatures have bestowed on us Told with wit wisdom and affection and rich with anecdote and science Letters from the Hive is nature writing at its best This is natural history to be treasured a sweet tribute that buzzes with life

**Victory Gardens for Bees** Lori Weidenhammer, 2016-04-30 Who knew modern civilization may be brought down not by plagues or war but by bees Or more correctly by no bees This book investigates the growing problem of bee mortality and offers practical measures we can all take to help In ecological terms bees play a critical role in the survival of many plant communities and continuation of life on this planet No pollination no seeds No seeds no future Now that bees are facing unprecedented levels of die off caused by a toxic mixture of environmental stresses a community based effort is needed to make gardens fields and landscapes healthy sanctuaries for bees Just as citizens banded together to produce Victory Gardens to offset the perilous food shortages of World Wars I and II now a similarly vital level of collective effort is needed to make our gardens into lifesaving shelters for these essential creatures Planning a bee friendly space can provide a beautiful and bountiful selection of edible crops native plants and fragrant ornamentals as well as herbs that have medicinal properties for both pollinators and people With the help of ten inspiring garden plans and planting guides Weidenhammer shows how bee friendly plants can be used in creative combinations for plots and pots of all sizes and are easily grown by novices and seasoned gardeners alike In the spirit of the history making Victory Gardens readers will learn how to pack optimum benefits into a limited space for the survival of hive and home and backyard beekeepers will learn great planting strategies for making sure their honeybees are healthy and have ample food to overwinter Victory Gardens for Bees is also buzzing with DIY projects that will provide nesting sites and essential supplies for precious pollinators With plenty of photographs to help readers identify bees of all stripes beekeeping

moving and fascinating chronicle of Sue Hubbell's seasonal second life as a commercial beekeeper. The Washington Post Alone on a small Missouri farm after the end of a thirty year marriage Hubbell found a new love of the winged buzzing variety. Left with little but the commercial beekeeping and honey producing business she started with her husband Hubbell found solace in the natural world as well as in writing about her experience. In evocative vignettes she takes readers through the seasonal cycle of her life as a beekeeper offering exquisitely rendered details of hives, harvests and honey while also reflecting on deeper questions. As the New York Times wrote: The real masterwork that Sue Hubbell has created is her life.

Breeding Honey Bees Hazem Fouda, 2017-11 Honey bees now live in all parts of the world except the extreme polar regions but this was not always so. Until the 17th century they were confined to the Old World where they had evolved and were widely distributed long before man appeared on earth. Primitive man harvested honey comb from bees nests in hollow trees and rock crevices. The operation with *Apis mellifera* is shown in many rock paintings found in Africa and some in Spain and with other species of bees in India and Australia. It is still carried out in various parts of the world and honey can be a lifesaving food for primitive peoples in times of severe famine. Beekeeping proper started when man learned to safeguard the future of swarms and colonies established from them by a certain amount of care and supervision, keeping them in separate purpose made hives which substituted for natural dwellings of bees. For convenience and safety a number of hives were often sited together in an apiary. Hive construction depended on what materials were at hand and on the local skills of various communities. It is almost certain that the beehive had no single origin; it was a likely development in any region populated by honey bees when man changed from hunting and collecting food to producing it and started a settled existence. The earliest centers of culture were in the Middle East in hot dry open country. Pottery vessels were made during most of the Neolithic period from perhaps 5000 B.C. onwards and the first hives there may have been pottery vessels in which swarms happened to settle. In ancient Egypt and other Mediterranean regions long cylindrical hives were made of mud clay or other materials and used in a horizontal position. Ancient Egyptian drawings show honey harvesting about 1450 B.C. The beekeepers used smoke to drive the bees from the back of the hive to the front and honey combs could be removed without killing bees; the brood combs were recognized and could be left intact. Hives in Ancient Greece followed a somewhat similar style and fragments of pottery hives have been excavated from 26 sites. In hot dry regions the hives were often stacked together and sometimes embedded in a wall to provide insulation against the heat. In agricultural communities techniques were developed for making containers of basket work as well as pottery. Baskets were also used to house bees and they have changed little through the ages; those of coiled straw are made today in the same way as before 5000 B.C. Wicker baskets were woven from materials such as pliable hazel twigs. All these primitive hives fulfilled certain necessary functions: they protected the bees and their combs from wind, rain and extremes of heat or cold; their flight entrances were made small enough for the bees to guard and there was some other opening through which the beekeeper could get at the honey and

wax which constituted his harvest Wood bark and clay were themselves weatherproof straw and wicker hives were generally protected with an additional cover and wicker hives were often plastered with mud and cow dung A large and healthy population is an absolute must for optimizing honey yield Large colonies disproportionately produce more honey than smaller ones In other words one colony of 60 000 bees will produce more honey than two colonies of 30 000 each combined the larger the colony population the greater honey production per bee As the name honey bee implies honey bees natural tendency to prepare for winter by hoarding honey Fall is when the preparation for population growth and subsequent honey yield begins Keeping the bees healthy strong and well provisioned is the first step in population management Natural sources of hydrocarbons for honeybees are nectar and honeydew as well as honey produced from them It is necessary to feed the bees during long periods of adverse weather conditions and when there is no availability of flow or when beekeepers removed the hydrocarbon food from bees during honey harvest and there is no prospect for the flow to occur The hydrocarbon food needs to be supplemented because during beekeeping season from spring to winter feeding a bee colony should have at least a 5 kg permanent hydrocarbon supply A vital condition of the bee colonies to have good overwintering is a proper winter food supply The amount of food provided to bees is a one time dose and the time of supplying winter supplementation is an important element of the so called winter feeding of bee colonies Hope this book contributes in flourishing honey bees products that contributes in its turn in our daily diets and health besides bees contributes to the provision of pollination services assuring crop yields and helping maintain plant biodiversity in natural ecosystems The publication was made possible due to the efforts and the expertise of the contributing authors They are gratefully acknowledged
