FUEL SYSTEM

Figure 1
Air Cleaner

1. Air Cleaner Primary
Element

2. Air Cleaner Secondary
(Safety) Element

NOTE: Compressed air, not to exceed 100 psi, may be used for cleaning. Blow dust from the inside to the outside by inserting the nozzle inside the element. Blow loose particles from the outside by holding the nozzle at least 6 inches from the element.

4. Inspect the element for signs of damage. If any damage exists, install a new filter element.
5. Clean the inside of the canister with a damp, lint free cloth, then reinstall the element.
6. Check and tighten all air induction connections before resuming operation.

The primary air cleaner element should be changed every 600 hours, (or whenever the 300 hour inspection shows the element to be damaged), or after ten cleanings, or whenever damage to the element is observed.

The secondary filter element is a safety element. It will protect the engine from damage in the event dust passes through a damaged primary element. The secondary (safety) element should be replaced when a new primary filter fails to extinguish the air cleaner restriction warning light, provided that the glowing light is not due to a malfunction in the electrical circuit. To install a new secondary (safety) element:

1. Remove the retaining nut and seal, Figure 1.
2. Remove the secondary (safety) element.
3. Install the new secondary element making certain that it seats properly to avoid admitting dust or dirt into the air intake tubes.
4. Install the retaining nut and seal. Tighten the retaining nut to a torque of 20 to 40 in. lbs. (.23 to .46 kgm).
5. Install a new primary filter element or the cleaned element as necessary. Tighten the wing nut securely.
6. Install the air cleaner cover.

IMPORTANT: The secondary (safety) filter element is not serviceable and must be replaced with a new one when required.

AIR CLEANER

The air cleaner, Figure 1, on the Ford 7000 Tractor is located in front of the radiator and is of the dry element type. It consists of a primary element and a secondary (safety) element.

The primary element should be cleaned whenever the air cleaner restriction warning light glows red. To clean the primary element:

1. Remove the filter element, Figure 1.
2. Check the rubber seal on the end of the element for adhesion. If the seal is loose, install a new element. A loose, damaged, or missing seal will allow dust to enter the engine and cause severe engine wear.
3. Clean the element by tapping it against the palm of your hand. DO NOT beat the element against the tire or a hard surface as damage to the element will result.
