

15 Drive Out Roll Pin

Use the appropriate-size punch to drive out the roll pin. You can use a long, 1/4-inch punch. You can remove the pin now or wait until the ring is removed. The order doesn't matter.

16 Remove Ring Gear

Remove the ring gear so you can remove the gear itself from the differential case. This is simply a matter of removing the ten bolts. These bolts are tight and require 80 ft-lbs or more of torque to remove. You can use an impact gun for this operation.

Place the differential on a block of wood or something soft to catch the gear. With a hammer, hit the punch to drive the ring gear through the bottom of the ring gear bolt holes. Make sure the punch is contacting the gear itself and not the threads on the side. Never hit the gear directly with a hammer. This will surely damage the gear and force replacement.

17 Separate Differential Case Halves

The differential case halves should come apart easily. Since this is an open differential, there are no other fasteners or clutch pack preload to overcome to separate them.

If your unit is difficult to separate, and this one was quite stubborn, you may need to resort to some persuasion with a hammer. Lightly tap the differential at the split line and alternate around the differential. Be careful as the casting differential is soft and you don't want to dent it. If there are any dents or dings, make sure to file them smooth before re-assembly.

Some mechanics mark the halves for clocking purposes, but the open differential only re-assembles in one way based on the orientation of the differential roll pin.
