A. ENGINE — DESCRIPTION AND OPERATION

This Chapter describes the overhaul and repair of the Ford Tractor diesel and gasoline engines. See Figures 1 and 2.

The diesel and gasoline engines are of the same basic design and overhaul procedures are essentially the same except as noted in the repair procedures.

Basic design differences are as follows:

The diesel engine piston has three compression rings and one oil control ring. The gasoline engine piston has two compression rings and one oil control ring. Both pistons have the combustion chamber in the top of the piston, however the diesel piston chamber is smaller to provide the higher compression ratio, Figure 3.

The fully floating piston pin is retained in the piston by two snap rings.

The gasoline engine intake manifold is designed with a water jacket around the main runner to provide a constant circulation of coolant to control the air intake temperature.
