

The Descriptive Phenomenological Psychological Method

Amedeo Giorgi, Barbro Giorgi¹ and James Morley

Phenomenology is a philosophy that began in 1900 with the publication of *Logical Investigations* by Edmund Husserl (1970). In that work Husserl introduced a novel way of examining and studying the phenomenon of consciousness. It should be remembered that psychology was founded in 1879 as the science of consciousness by Wilhelm Wundt in Leipzig. Wundt pursued the study of consciousness primarily by the use of empirical methods. Later, when the behaviorist movement (Watson, 1913), dominated the field, positivistic approaches became dominant. These approaches made sense because both empiricism and positivism, historically, were philosophies associated with scientific investigations: empiricism since the seventeenth century and positivism since the nineteenth century. Since phenomenology was the most recent philosophy to support scientific endeavors, and its criteria and emphases differ from those of empiricism or positivism, it has not been easily assimilated by psychology. It has taken time for psychologists to respond to what it has to offer. The exception that proves the rule is the impact that it had on the Würzburg experiments on thinking (Humphrey, 1963) that took place in the first decade of the twentieth century.

Like most intellectual movements phenomenology is not all of one piece. While Husserl laid out the main dimensions of the phenomenological

movement, almost every follower of his deviated from him in some manner or other. Since there are a variety of phenomenological interpretations one should not be surprised that several interpretations of the phenomenological method have taken place within psychology. In this chapter we will detail one way in which psychologists have adapted an articulation of the philosophical phenomenological method for its scientific purposes and only briefly describe some other interpretations without any effort at evaluation.

In a previous version of this chapter we offered a mostly historical and theoretical explication of the phenomenological movement in psychology. We covered the various interpretations of the meaning of phenomenology when applied to psychology. While including a synopsis of this historical review ahead, this new chapter is intended as an example that demonstrates how the method can be concretely applied to descriptive data, but we urge that it not be construed as a completed research project. Examples of complete contemporary applications will be referenced at the very conclusion. But before doing so, it is important to spell out the intricate but different and difficult interdisciplinary relationship between the philosophical and psychological levels of analysis.

Throughout most of its history, especially in the West, science has been based on some

Descriptive Phenomenological Psychological Method Rodger Broome, 2011 This paper is the methodology section of my doctoral dissertation that outlines the Descriptive Phenomenological Psychological Method of research as it has been taught to me by Amedeo P Giorgi Giorgi 2009 based his method on Husserl's descriptive phenomenological philosophy as an alternative epistemology for human science research This method section references Giorgi's work and the phenomenological tradition of Husserl Merleau Ponty and others Each step of Giorgi's modified Husserlian method is described and explained in the context of doing psychological research on the lived experience of the participants in my dissertation research The steps are 1 assume the phenomenological attitude 2 read entire written account for a sense of the whole 3 delineate meaning units 4 transform the meaning units into psychologically sensitive statements of their lived meanings and 5 synthesize a general psychological structure of the experience base on the constituents of the experience It is the first person psychological perspective that is sought so that an empathetic position can be adopted by the end user of the research

Reflections on Certain Qualitative and Phenomenological Psychological Methods Amedeo Giorgi, 2020-06-15 One could describe the status of psychological research today as one in which qualitative methods based upon diverse philosophies have been developing and advancing at a fast pace It is a time therefore when reflections on this state of affairs are appropriate The five essays in this book are all concerned with qualitative methods and their philosophical backgrounds Briefly the first essay contrasts the relative merits of the three most used philosophical bases for qualitative methods empirical philosophy hermeneutics and Husserlian descriptive phenomenology The second essay tries to resolve the tensions between descriptive and interpretive methods Both are of

service to science but they relate to different conditions The third essay discusses certain pitfalls that should be avoided when conducting psychological research on oneself The fourth essay describes the extension of certain guidelines when using the descriptive phenomenological method The fifth essay challenges the assumption of naturalism for psychology and argues for the development of a non naturalistic method for psychology

psychology The aim of this book is to consider some ways in which the psychological therapies might be able to move away from the crisis mainly caused by what is currently wrongly being understood in terms of evidence based practice as the nature of psychotherapeutic knowledge Instead it is proposed that primacy be given to practice considering theories having implications rather than applications and privileging thoughtfulness with notions of research being seen more as cultural practices This book is based on a special issue of the European Journal of Psychotherapy Counselling
