PREFACE The emerging networks in our society will touch upon the life of everyone These networks have started to bring about an immense information revolution The revolution within our intellectual life will be similar to the materialistic revolution that followed the invention of the steam and the internal combustion engines From the perspective of the 1980s the information networks are indeed evolving and their influence can only be gradual However the strides of progress are accelerating in the 1990s Networks in our society offer the most candid area of convergence for the computer and the communication technologies The two technologies are mature in their own right However there are a few major factors that prevent network engineers from constructing modern communication systems from components borrowed from each of these two technologies Major innovations are happening Specialized components evolve in synergistic patterns New technologies emerge Inquisitive minds cross disciplinary barriers
Intelligent Broadband Multimedia Networks Syed V. Ahamed, Victor B. Lawrence, 2012-12-06 Intelligent Broadband Multimedia Networks is a non mathematical but highly systems oriented coverage of modern intelligent information networks This volume focuses on the convergence of computers and communications technologies Most of the concepts that are generic to all intelligent networks and their microscopic and macroscopic functions are presented This book includes specific architectures that can be used by network designers and planners telecommunications managers computer scientists and telecommunications professionals The breadth of this coverage and the systems orientation of this work make the text suitable for use in advanced level courses on intelligent communications networks The material in this volume ranges from defining intelligent networks to more specific coverage of educational medical and knowledge based networks Each of the 20 chapters address issues that can help make the transition from computer design to the underlying concepts of modern telecommunications systems to considerations necessary for the implementation of intelligent network services Special and timely coverage of emerging technologies such as HDSL ADSL BISDN wireless broadband access ATM and other topics are given expanded treatment The authors have included design methodologies for installing intelligence into almost any communications systems and procedures for using such intelligence according to the type of function expected from these networks Unique features of the book are a 64 page glossary of key terms with expanded explanations used in the field a 23 page index that makes it easy to search for important information running headers on each page to help the busy professional use the book as a reference design tool complete references

Information Fusion for Cyber-Security Analytics Izzat M Alsmadi, George Karabatis, Ahmed Aleroud, 2016-10-21 This book highlights several gaps that have not been addressed in existing cyber security research. It first discusses the recent attack prediction techniques that utilize one or more aspects of information to create attack prediction models. The second part is dedicated to new trends on information fusion and their applicability to cyber security in particular graph data analytics for cyber security unwanted traffic detection and control based on trust management software defined networks security in wireless sensor networks their applications and emerging trends in security system design using the concept of social behavioral biometric. The book guides the design of new commercialized tools that can be introduced to improve the accuracy of existing attack prediction models. Furthermore, the book advances the use of Knowledge based Intrusion Detection Systems (IDS) to complement existing IDS technologies. It is aimed towards cyber security researchers.

Intelligent Communication Systems Nobuyoshi Terashima, 2001-10-20 This book offers a thorough review of research on intelligent communication systems focusing on the applications of artificial intelligence to telecommunications that help realize user friendly interfaces. *Intelligent Communication Systems* presents the direct result of more than a decade of the author's experiences, research activity and education in applying artificial intelligence to telecommunications technology. In this book, several fundamental research areas are covered. Some of the areas covered are human friendly interfaces for telecommunication services with such concepts as Telesensation and HyperReality, computer vision and the telecommunication description method based on state space. In artificial intelligence research, state space is the set of all attainable states of a problem and the possible alternative courses of action to determine the best solution to the problem.

Engineering Intelligent Systems Barclay R. Brown, 2022-10-04 Engineering Intelligent Systems explores the three key disciplines of intelligent systems. As artificial intelligence (AI) and machine learning technology continue to develop and find new applications, advances in this field have generally been focused on the development of isolated software data analysis systems or of control systems for robots and other devices. By applying model based systems engineering to AI, however, engineers can design complex systems that rely on AI based components, resulting in larger, more complex intelligent systems that successfully integrate humans and AI. Engineering Intelligent Systems relies on Dr. Barclay R. Brown's 25 years of experience in software and systems engineering to propose an integrated perspective to the challenges and opportunities in the use of artificial intelligence to create better technological and business systems. While most recent research on the topic has focused on adapting and improving algorithms and devices, this book puts forth the innovative idea of transforming the systems in our lives, our societies and our businesses into intelligent systems. At its heart, this book is about how to combine systems engineering and systems thinking with the newest technologies to design increasingly intelligent systems.

Engineering Intelligent Systems readers will also find An introduction to the fields of artificial intelligence with machine learning model based systems engineering MBSE and systems thinking the key disciplines for making systems smarter An example of how to build a deep neural network in a spreadsheet with no code or specialized mathematics required An approach to the visual representation of systems using techniques from moviemaking storytelling visual systems design and model based systems engineering An analysis of the potential ability of computers to think understand and become conscious and its implications for artificial intelligence Tools to allow for easier collaboration and communication among developers and engineers allowing for better understanding between stakeholders and creating a faster development cycle A systems thinking approach to people systems systems that consist only of people and which form the basis for our organizations communities and society Engineering Intelligent Systems offers an intriguing new approach to making systems more intelligent using artificial intelligence machine learning systems thinking and system modeling and therefore will be of interest to all engineers and business professionals particularly systems engineers
