Design For Sustainability A Sourcebook Of Integrated Ecological Solutions:

Design for Sustainability, 2002 Ecological principles and concepts are becoming increasingly integrated into our everyday lives influencing where and how we live This book is an inspiring radical and detailed collection of the eco solutions that can be applied to a range of design challenges *Design for Sustainability* Janis Birkeland, 2002 First Published in 2002 Routledge is an imprint of Taylor Francis an informa company *Design for Sustainability* Janis Birkeland, 2012-05-04 With radical and innovative design solutions everyone could be living in buildings and settlements that are more like gardens than cargo containers and that purify air and water generate energy treat sewage and produce food at lower cost Birkeland introduces systems design thinking that cuts across academic and professional boundaries and the divide between social and physical sciences to move towards a transdisciplinary approach to environmental and social problem solving This sourcebook is useful for teaching as each topic within the field of environmental management and social change has pairs of short readings providing diverse perspectives to compare contrast and debate *Design for Sustainability* presents examples of integrated systems design based on ecological principles and concepts and drawn from the foremost designers in the fields of industrial design materials housing design urban planning and transport landscape and permaculture and energy and resource management *Design for Sustainability* Janis Birkeland, 2002 *Positive Development* Janis Birkeland, 2012-05-16 Janis Birkeland presents the innovative new paradigm of Positive Development in which the built environment provides greater life quality health amenity and safety for all without sacrificing resources or money With a different form of design development itself can become a sustainability solution A cornerstone of this new paradigm is the eco retrofitting of the vast urban fabric we already inhabit The author presents a revolutionary new tool called SmartMode to achieve this end This book challenges everyone working in or studying the areas of sustainable development planning architecture or the built environment to rethink their current ideas and practices **Building Services Design for Energy Efficient Buildings** Paul Tymkow, Savvas Tassou, Maria Kolokotroni, Hussam Jouhara, 2020-07-12 The role and influence of building services engineers are undergoing rapid change and are pivotal to achieving low carbon buildings However textbooks in the field have tended to remain fairly traditional with a detailed focus on the technicalities of heating ventilation and air conditioning HVAC systems often with little wider context This book addresses that need by embracing a contemporary understanding of the urgent challenge to address climate change together with practical approaches to energy efficiency and carbon mitigation for mechanical and electrical systems in a concise manner The essential conceptual design issues for planning the principal building services systems that influence energy efficiency are examined in detail These are HVAC and electrical systems In addition the following issues are addressed background issues on climate change whole life performance and design collaboration generic strategies for energy efficient low carbon design health and wellbeing and post occupancy evaluation building ventilation air conditioning and HVAC system selection thermal energy generation and

distribution systems low energy approaches for thermal control electrical systems data collection controls and monitoring building thermal load assessment building electric power load assessment space planning and design integration with other disciplines In order to deliver buildings that help mitigate climate change impacts a new perspective is required for building services engineers from the initial conceptual design and throughout the design collaboration with other disciplines This book provides a contemporary introduction and guide to this new approach for students and practitioners alike **Saving The Planet By Design** Ken Yeang,2019-10-08 Can we save the Planet For a resilient durable and sustainable future for human society we need to repurpose reinvent redesign remake and recover our human made world so that our built environment is benignly and seamlessly biointegrated with Nature to function synergistically with it These are the multiple tasks that humanity must carry out imminently if there is to be a future for human society and all lifeforms and their environments on the Planet Addressing this is the most compelling question for those whose daily work impacts on Nature such as architects engineers landscape architects town planners environmental policy makers builders and others but it is a question that all of humanity needs to urgently address Presented here are two key principles as the means to carry out these tasks ecocentricity being guided by the science of ecology and ecomimesis as designing and making the built environment including all artefacts based on the emulation and replication of the ecosystem concept Designing with ecology is contended here as the authentic approach to green design from which the next generation of green design will emerge going beyond current use of accreditation systems For those who subscribe to this principle this is articulated here showing how it can be implemented by design Adopting these principles is fundamental in our endeavour to save our Planet Earth and changes profoundly and in entirety the way we design make manage and operate our built environment **Advances in Ergonomics in Design**

Francisco Rebelo,Marcelo M. Soares,2019-06-03 This book provides readers with a timely snapshot of ergonomics research and methods applied to the design development and prototyping as well as the evaluation training and manufacturing of products systems and services Combining theoretical contributions case studies and reports on technical interventions it covers a wide range of topics in ergonomic design including ecological design cultural and ethical aspects in design Interface design user involvement and human computer interaction in design as well as design for accessibility and many others The book particularly focuses on new technologies such as virtual reality state of the art methodologies in information design and human computer interfaces Based on the AHFE 2019 International Conference on Ergonomics in Design held on July 24 28 2019 Washington D C USA the book offers a timely guide for both researchers and design practitioners including industrial designers human computer interactionand user experience researchers production engineers and applied psychologists

Design for Transport Mike Tovey,2016-04-15 The central premise of Design for Transport is that the designer s role is to approach design for transport from the point of view of the user People have a collection of wants and needs and a significant proportion of them are to do with their requirements for mobility The authors show how creative designers can

take a user focused approach for a wide range of types of transport products and systems In so doing their starting point is one of creative dissatisfaction with what is currently available and their specialist capability is in imagining and developing new solutions which respond to that opportunity How this is tackled varies depending on the context and the variety of solutions produced reflects the different aspirations and needs of the people they are designing for The chapters cover user needs and transport design and the transport system transport design case studies and the case for the automobile A conclusion briefly signals what the future for transport design might be Lavishly illustrated throughout in four colour Design for Transport is an imaginative and rigorous guide to how designers can take a user centred and socially responsible approach to tackling a range of types of transport from systems to products and from bicycles to automobiles demonstrating a rich array of solutions through case studies

Education for Wicked Problems and the Reconciliation of Opposites

Raoul J. Adam, 2016-02-26 The recognition and reconciliation of opposites lies at the heart of our most personal and global problems and is arguably one of the most neglected developmental tasks of Western education Such problems are wicked in the sense that they involve real life decisions that have to be made in rapidly changing contexts involving irreducible tensions and paradoxes By exploring our human tendency to bifurcate the universe Education for Wicked Problems the Reconciliation of Opposites proposes a way to recognise and re solve some of our most wicked problems Applying an original theory of bi relational development to wicked problems Adam proposes that our everyday ways of knowing and being can be powerfully located and understood in terms of the creation emergence opposition convergence collapse and trans position of dyadic constituents such as nature culture conservative liberal and spirit matter He uses this approach to frame key debates in and across domains of knowledge and to offer new perspectives on three of the most profound and related problems of the twenty first century globalisation sustainability and secularisation This book is a comprehensive study of dyads and dyadic relationships and provides a multidisciplinary and original approach to human development in the face of wicked problems It will be of great interest to students and academics in education and psychosocial development as well as professionals across a range of fields looking for new ways to recognise and re solve the wicked problems that characterise their professions
