Understanding Urban Cycling Justin Spinney, 2020-10-28 Academic interest in cycling has burgeoned in recent years with significant literature relating to the health and environmental benefits of cycling the necessity for cycle specific infrastructure and the embodied experiences of cycling Based upon primary research in a variety of contexts such as London Shanghai and Taipei this book demonstrates that recent developments in urban cycling policy and practice are closely linked to broader processes of capital accumulation It argues that cycling is increasingly caught up in discourses around smart cities that emphasise technological solutions to environmental problems and neoliberal ideas on individual responsibility and bio political conduct which only results in solutions that prioritise those who are already mobile Accordingly the central argument of the book is not that the popularisation of cycling is inherently bad but that the manner in which cycling is being popularised gives cause for social and environmental concern Ultimately the book argues that cycling has now become a vehicle for sustaining pro growth agendas rather than subverting them or shifting to sustainable no growth de growth and less technologically driven visions of modernity This book makes an innovative contribution to the fields of Cycling Studies Mobilities and Transport and will be of interest to students and academics working in Human Geography Transport Studies Urban Studies Urban Planning Public Policy Sociology and Sustainability

An Analysis of the Role of Cycling in Sustainable Urban Mobility Ricardo Marqués, 2020-04-30 This book analyses the reasons why cycling is returning to cities around the world as an essential element in solving and overcoming the crisis of the dominant car centric model of urban mobility with its known adverse consequences of congestion pollution and urban space consumption It argues that it is not possible to solve this crisis without giving a central role to the bicycle both as a mode of transport in itself and as an integrating and cohesive element of other forms of transport The bicycle due to its special characteristics of autonomy simplicity and energy efficiency must be a key part of any sustainable urban mobility project It not only returns human scale to the city but is also essential for the effective design of any intermodal system of sustainable metropolitan public transport

Sustainable Tourism IV C. A. Brebbia, F. D. Pineda, 2010 Tourism has become a major international industry with many countries all over the world relying on the income it produces Because it is a major source of finances and employment government and other institutions activitely promote tourism regardless of the impact on the environment ecology and social structure of the region The demands of tourism can contribute to the destruction of the natural and cultural environment upon which it depends The natural and cultural landscape s capacity to accommodate the local and worldwide effects of tourism the typology thereof and its implications for the economy and society constitute very important study objectives The development of tourism can result in the degradation of natural landscapes that paradoxically attract tourists to such areas Featured topics include Tourism Strategies Tourism as a Tool of Development Tourism Impact Tourism and Protected Areas Rural Tourism Community Involvement IT and Tourism Climate Change and Tourism Environmental Issues Art Architecture and Culture Modelling Emergent Strategies for Tourism Development Landscape and Tourism Tourism and Urban Planning

Tourism and Environment F. D. Pineda, 2013-10-16 The contributions contained in this volume deal with two perspectives of tourism and environment the role of the environment in tourism and environmental tourism The same message would be expected in both cases The environment comprises the set of biophysical and cultural events surrounding us and influences the activities developed depending on time and site Among the environmental characteristics of a region climate is usually the most relevant and conditions almost all other components Climate defines much of the natural as well as the urban cultural landscape and the countryside of an area Seasonal environmental change affects the life and culture of each place and largely explains the choice of destination of travellers Environment and landscape therefore give rise to an interesting and varying relationship over the year Thus coastal landscapes are not inherently more beautiful in summer than in other seasons but environmental conditions cause a greater demand in this season Certain places in the world captivate visitors who flock to them in large numbers Local people recognize the benefit of this employers become interested in the economic aspects and so the tourism infrastructure develops The appeal of good climate has led to a change from a rural subsistence culture to

a lucrative services economy in some areas Unfortunately however in many cases short sightedness and corruption can lead to the ruin of the natural landscape Situations like this are now common throughout the world due to the environmental mismanagement of tourism Local populations within emerging tourism based economies should learn this lesson The papers included in this volume address important issues related to tourism and the environment and offer a better understanding of some of the current challenges

The Politics of Cycling Infrastructure Cox, Peter,Koglin, Till,2021-07-14 This volume casts a critical gaze on current practices and on the wider relationship of bicycling to other forms of urban mobility especially within the context of sustainable and livable cities The book s international contributors provide an interdisciplinary critical analysis of policy and practice

Time, Innovation and Mobilities Peter Frank Peters,2006 By analyzing historic and contextualized transit practices and case studies of travel in technological cultures car travel air travel and cycling in Dutch towns this book argues that travel cannot simply be reduced to getting from A to B
