Burkholder,2010 The focus of this thesis was to explore the concept of empathic design and consider how this may relate to the field of art therapy A review of relevant literature included topics of empathic design disability and design and a section on the relevance to art therapy I developed with the assistance of The School of the Art Institute of Chicago s Designed Objects faculty Coordinator Lisa Norton a course entitled Design for Well Being I implemented a curriculum which explored empathic design for undergraduate design students This began with projects that focused on self empathy followed by peer to peer collaborations and concluded with an empathic design collaboration between the design students and volunteers from an out patient rehabilitation facility The goal was to collaborate and design a process or product to promote well being for the out patient

volunteers The course model is described along with six case studies describing the partnerships and empathic design end products Survey questions completed by the design students at the completion of the course are also shared Similarities and differences between the structuring and evolution of an effective empathic design collaboration are discussed for their application to the practice of art therapy In conclusion the Design for Well Being course allowed me a unique opportunity in the role of educator to the design students and art therapy intern to the out patient volunteers to bridge diverse populations of people through the practice of empathic design These collaborations evidence what is possible when individuals offer their insight and skill in designing for the well being of another leaving both of the participants affected by the exchange Future research considering empathic design as a responsive tool in art therapy is indicated
