Hernandez, 2022-09-13 Architecture is very multi disciplinary attracting many different professions This is reflected in the contributions contained in this volume that were originally presented at the 9th International Conference on Harmonisation between Architecture and Nature The included works review the challenges and new opportunities of contemporary architecture as a result of advances in design and new

building technologies as well as the development of new materials Never before in history have architects and engineers had such a range of new processes and products open to them In spite of that the construction industry lags behind all others in taking advantage of a wide variety of new technologies This is understandable due to the inherent complexity and uniqueness of each architectural project Advances in computer and information systems including robotics offers the possibility of developing new architectural forms construction products and building technologies that are just now starting to emerge Changes have also taken place in the way modern society works and lives due to the impact of modern technologies Patterns of work have been disrupted and changed affecting transportation and the home environment The demand is for a new type of habitat that can respond to the changes and the consequent requirements in terms of the urban environment Such topics are dealt with as building technologies design by passive systems design with nature cultural sensitivity life cycle assessment resources and rehabilitation and many others including case studies from many different places around the world **Energy**

**Building Physics - Heat, Air and Moisture** Hugo S. L. Hens, 2017-08-08

Bad experiences with construction quality the energy crises of 1973 and 1979 complaints about sick buildings thermal acoustical visual and olfactory discomfort the need for good air quality the move towards more sustainability all these have accelerated the development of a field that for a long time was hardly more than an academic exercise building physics in English speaking countries sometimes referred to as building science The discipline embraces domains such as heat and mass transfer building acoustics lighting indoor environmental quality and energy efficiency In some countries fire safety is also included Through the application of

physical knowledge and its combination with information coming from other disciplines the field helps to understand the physical phenomena governing building parts building envelope whole buildings and built environment performance although for the last the wording urban physics is used Today building physics has become a key player on the road to a performance based building design The book deals with the description analysis and modeling of heat air and moisture transport in building assemblies and whole buildings with main emphasis on the building engineering applications including examples The physical transport processes determine the performance of the building envelope and may influence the serviceability of the structure and the whole building Compared to the second edition in this third edition the text has partially been revised and extended
