Ocular Therapeutics and Drug Delivery Indra K. Reddy, 1995-12-12 Since ocular therapeutics and drug delivery is a subject of interest to specialists from various disciplines such as chemical biochemical medical pharmaceutical and toxicological it truly presents a unique situation requiring a multi disciplinary approach in understanding and addressing various problems Yet we see that scientists associated with these areas are working by and large independently of one another thus limiting dissemination of knowledge experience and ideas that would greatly enhance the overall progress in this area of research Regrettably the information currently available in ocular therapeutics and drug delivery though extensive is still fragmented into various disciplines making meaningful synthesis difficult Several books are available that cover one or two aspects of the multi disciplinary fields on an individual basis however none is available that covers all of them The chapters contained in this book are specific to various interrelated areas of ocular therapeutics and drug delivery and are written by acknowledged experts from both academia and industry The book itself is divided into five parts namely I overview basic principles and methodology II pathopharmacology and clinical applications III chemical biochemical approaches to ocular drug delivery IV formulation and drug delivery considerations and V industrial and regulatory considerations Individual chapters in each section apart from presenting a concise text entail an extensive listing of references

Drug Discovery and Development Michael Williams, Jeffrey B. Malick, 2012-12-06 The conceptual process of drug discovery is one that is often the result of an identified need in a defined disease area This need represents a mandate from the marketing department of a pharmaceutical company or a breakthrough at the research level that has agreed applicability in response to a valid therapeutic demand Although the intelligent design and development of new therapeutic entities as evidenced by Sir James Black's H₂ receptor antagonist cimetidine Tagamet is intellectually satisfying many novel drugs arise from serendipity from the chance observation of the research scientist or the clinician that a compound has unexpected actions of use for the treatment of human disease states Drugs that have been identified by this route include the antipsychotic chlorpromazine and the putative anxiolytic buspirone The events surrounding the process of drug discovery and development are the theme of the present volume which attempts

to present in a logical and lucid manner the complexity of a process that is often naively assumed to represent nothing more than the identification of a new compound and its rapid introduction into humans free of such complications as efficacy selectivity safety bioavailability toxicity and need **Bioaccumulation of Xenobiotic Compounds** Des W.

Connell,2018-01-18 One of the very few if not only books written exclusively related to this topic This book comprehensively outlines the principles governing the accumulation of chemicals from the environment by organisms Packed with tables and diagrams this work reviews the experimental data available on both terrestrial and aquatic systems It describes methods which are used to predict bioaccumulation of chemicals from their physicochemical properties It also reviews environmental and other factors influencing bioaccumulation This text also includes previously unpublished theoretical explanations of several bioaccumulation processes including food chain biomagnification Information in this exceptional volume is useful to government officials involved with environmental management chemists biologists consultants working with chemical waste control researchers and graduate students **Topics in Topicals** R. Marks,2012-12-06 Substances that are applied to the

skin to heal it make it feel better or improve its appearance have much in common They can all do damage to the skin as well as perform the task for which they were designed They and the substances they contain are all absorbed through the skin to a greater or lesser extent In addition all these agents are constructed in the same general way For these reasons it seems odd and uneconomical to consider topical pharmaceuticals toiletry products and cosmetics separately This was the reasoning behind the holding of a small symposium of workers involved with one or another aspect of the formulation of substances destined for application to the skin Several aspects of the subject are covered in this book which is based on the symposium and the contents should be of interest to all who are concerned with the prescription assessment or formulation of topical agents 9 1 Acne Caused and Treated by Topical Agents W J CUNLIFFE The four main aetiological factors involved in the development of l acne are 1 an elevated sebum excretion rate 2 ductal hyper 3 keratinization 2 3 an abnormality of microbial function 4 host 4 inflammatory response Although opinions differ on both sides of the Atlantic most authorities in the United Kingdom believe that increased sebum excretion rate is the main drive to acne there being a definitive relationship between the severity of the acne and the seborrhoea of this disease Annual Reports in Medicinal Chemistry ,1979-11-14 Annual
