Nilson, 1986 Designed for courses in the design of concrete structures or reinforced concrete design this text aims to help readers gain a firm understanding of the behaviour of reinforced concrete and a proficiency in the methods used in current design practice

Strengthening Design of Reinforced Concrete with FRP Hayder A. Rasheed, 2014-12-16 This textbook establishes the art and science of strengthening design of reinforced concrete with FRP beyond the abstract nature of the design guidelines It addresses material characterization flexural strengthening of beams and slabs shear strengthening of beams and confinement strengthening of columns It discusses the installation and inspection of FRP as externally bonded or near surface mounted composite systems for concrete members It provides innovative design aids based on ACI 440 code provisions end of chapter questions references for further study and a solutions manual with qualifying course adoption

Earthquake Resistant Engineering Structures VI C. A. Brebbia, 2007 The problem of protecting the built environment in earthquake prone regions of the world involves not only the optimal design and construction of new facilities but also the upgrading and rehabilitation of existing structures and infrastructures The latter is a laborious and expensive task which can be accomplished only gradually However the inestimable loss of life and the colossal costs following a major earthquake in a metropolitan area provide sufficient reason to make it an important challenge for the scientific and technical community Containing papers presented at the Sixth International Conference on Earthquake Resistance and Engineering Structures this book will be invaluable to engineers scientists and managers working in industry academia research organizations and governments The book encompasses a wide range of topics such as Site Effects and Geotechnical aspects Earthquake resistant design Seismic Behaviour and Vulnerability Structural Dynamics Monitoring and Testing Bridges Heritage Buildings Masonry Construction Retrofitting Passive Protection Devices and Seismic Isolation Lifelines Design Codes and Response Spectre

Nutritional Care of the Patient with Gastrointestinal Disease Alan L Buchman, 2015-08-06 This evidence based book serves as a clinical manual as well as a reference guide for the diagnosis and management of common nutritional issues in relation to gastrointestinal disease Chapters cover nutrition assessment macro and micronutrient absorption malabsorption food allergies prebiotics and dietary fiber probiotics and intestinal microflora nutrition and GI cancer nutritional management of reflux nutrition in IBS and IBD nutrition in acute and chronic pancreatitis enteral nutrition parenteral nutrition medical and endoscopic therapy of obesity surgical therapy of obesity pharmacologic nutrition and nutritional counseling

Structural Cross Sections Naveed Anwar, Fawad Ahmed Najam, 2016-11-08 Structural Cross Sections Analysis and Design provides valuable information on this key subject covering almost all aspects including theoretical formulation practical analysis and design computations various considerations and issues related to cross sectional behavior and computer applications for determination of cross sectional response The presented approach can handle all complex shapes material behaviors and

configurations The book starts with a clear and rigorous overview of role of cross sections and their behavior in overall structural design process Basic aspects of structural mechanics are reviewed and procedures to determine basic cross sectional properties stress and strain distributions stress resultants and other response parameters are provided A brief discussion about the role of material behavior in cross sectional response is also included The unified and integrated approach to determine axial flexural capacity of cross sections is utilized in development of P M and M M interaction diagrams of cross sections of various shapes The behavior and design of cross sections subjected to shear and torsion is also included with emphasis on reinforced concrete sections Several detailed flow charts are included to demonstrate the procedures used in ACI BS and Euro codes for design of cross section subjected to shear and torsion followed by solved examples The book also presents the discussion about various factors that can lead to ductile response of cross sections especially those made of reinforced concrete The definition and development of action deformation curves especially moment curvature curve is discussed extensively Various factors such as confinement rebar distribution and axial load effect on the ductility are shown through examples The use of moment curvature curve to compute various section response parameters is also explained though equations and examples Several typical techniques and materials for retrofitting of cross sections of reinforced concrete beams columns and slabs etc are reviewed A brief discussion of various informative references related to the evaluation and retrofitting of structures is included for practical applications Towards the end the book provides an overview of various software applications available for cross section design and analysis A framework for the development of a general purpose cross section analysis software is presented and various features of few commercially available software packages are compared using some example cross sections
