**PEGSUS 4.0 User's Manual** N. E. Suhs, R. W. Tramel, 1991 Many aerodynamic configurations are too complex to be represented by a single computational mesh A multiple mesh domain decomposition method called chimera has been developed to allow complex aerodynamic configurations to be modeled by a system of individually generated meshes each representing a component of the overall configuration The chimera approach requires the use of two computer codes PGSUS and a flow solver PGSUS calculates the interactions among the meshes and produces a file consisting of interpolation information that is used by the flow solver to obtain a global flow field solution for the entire mesh system This report documents the design and use of the latest version 4 0 of PGSUS and describes techniques for proper modeling of complex aerodynamic configurations *Air Force Manual* United States.
