Effective GUI Testing Automation Kanglin Li, Mengqi Wu, 2006-02-20 Have you

tried using an automated GUI testing tool only to find that you spent most of your time configuring adjusting and directing it. This book presents a sensible and highly effective alternative it teaches you to build and use your own truly automated tool. The procedure you will learn is suitable for virtually any development environment and the tool allows you to store your test data and verification standard separately so you can build it once and use it for other GUIs. Most if not all of your work can be done without test scripts because the tool itself can easily be made to conduct an automatic GUI survey collect test data and generate test cases. You will spend virtually none of your time playing with the tool or application under test. Code intensive examples support all of the book's instruction which includes these key topics: Building a C API text viewer Building a test monkey Developing an XML viewer using XPath and other XML related classes Building complex serializable classes for GUI test verification Automatically testing executable GUI applications and user defined GUI controls Testing managed NET and unmanaged GUI applications Automatically testing different GUI controls including Label TextBox Button CheckBox RadioButton Menu Verifying test results. Effective GUI Test Automation is the perfect complement to Li and Wu's previous book Effective Software Test Automation. Developing an Automated Software Testing Tool Together they provide programmers testers designers and managers with a complete and cohesive way to create a smoother swifter development process and as a result software that is as bug free as possible.

Software Quality Approaches: Testing, Verification, and Validation Michael Haug, Eric W. Olsen, Luisa Consolini, 2001-10-23 C Amting Directorate General Information Society European Commission Brussels. Under the 4 Framework of European Research the European Systems and Software Initiative ESSI was part of the ESPRIT Programme. This initiative funded more than 470 projects in the area of software and system process improvements. The majority of these projects were process improvement experiments carrying out and taking up new development processes methods and technology within the software development process of a company. In addition nodes centres of expertise European networks organisations managing local activities training and dissemination actions complemented the process improvement experiments. ESSI aimed at improving the software development capabilities of European enterprises. It focused on best practice and helped European companies to develop world class skills and associated technologies to build the increasingly complex and varied systems needed to compete in the marketplace. The dissemination activities were designed to build a forum at European level to exchange information and knowledge gained within process improvement experiments. Their major objective was to spread the message and the results of experiments to a wider audience through a variety of different channels. The European Experience Exchange UR X project has been one of these dissemination activities within the European Systems and Software Initiative. UR has collected the results of practitioner reports from numerous workshops in Europe and presents in this series of books the results of Best Practice achievements in European Companies over the last few years.
