Efficient Metamathmatics:

Complexity, Logic, and Recursion Theory Andrea Sorbi,2019-05-07 Integrates two classical approaches to computability Offers detailed coverage of recent research at the interface of logic computability theory nd theoretical computer science Presents new never before published results and provides informtion not easily accessible in the literature **Intelligent Computer Mathematics** Christoph Benzmüller,Bruce Miller,2020-07-17 This book constitutes the refereed proceedings of the 13th International Conference on Intelligent Computer Mathematics CICM 2020 held in Bertinoro Italy in July 2020 The 15 full papers 1 invited paper and 2 abstracts of invited papers presented were carefully reviewed and selected from a total of 35 submissions The papers focus on advances in automated theorem provers and formalization computer algebra systems and their libraries and applications of machine learning among other topics The conference was held virtually due to the COVID 19 pandemic **Dick de Jongh on Intuitionistic and Provability Logics** Nick Bezhanishvili,Rosalie Iemhoff,Fan Yang,2024-07-25 This book is dedicated to Dick de Jongh s contributions to the theory of intuitionistic and provability logics Consisting of 13 chapters written by leading experts this book discusses de Jongh s original contributions and consequent developments that have helped to shape these fields The book begins with an autobiographic note by Dick de Jongh which discusses the main themes of his work and places the other contributions in context The next four chapters explore the De Jongh Sambin fixed point theorem and other contributions to provability and interpretability logics The following four chapters focus on modal intuitionistic and intuitionistic modal logics They discuss independence of formulas unification and de Jongh formulas in intuitionistic and modal logics Then there follow two chapters on the other two areas to which Dick de Jongh made important contributions the theory of well partial orders and formal learning theory The second to last chapter on Origami Geometry can be seen as representing the Master of Logic program of the Institute for Logic Language and Computation ILLC in which de Jongh invested a lot of energy The book ends with a complete bibliography of Dick de Jongh in the last chapter This volume provides a vital overview and continuation of de Jongh s prolfic work in the theory of intuitionistic and provability logics **Handbook of Proof Theory** S.R. Buss,1998-07-09 This volume contains articles covering a broad spectrum of proof theory with an emphasis on its mathematical aspects The articles should not only be interesting to specialists of proof theory but should also be accessible to a diverse audience including logicians mathematicians computer scientists and philosophers Many of the central topics of proof theory have been included in a self contained expository of articles covered in great detail and depth The chapters are arranged so that the two introductory articles come first these are then followed by articles from core classical areas of proof theory the handbook concludes with articles that deal with topics closely related to computer science **Feasible Mathematics II** Peter Clote,Jeffrey B. Remmel,2013-03-13 Perspicuity is part of proof If the process by means of which I get a result were not surveyable I might indeed make a note that this number is what comes out but what fact is this supposed to confirm for me I don t know what is

Gabbay,Sergei S. Goncharov,Michael Zakharyaschev,2006-07-02 This is an overview of the current state of knowledge along with open problems and perspectives clarified in such fields as non standard inferences in description logics logic of provability logical dynamics and computability theory The book includes contributions concerning the role of logic today including unexpected aspects of contemporary logic and the application of logic This book will be of interest to logicians and mathematicians in general   The Jevons Paradox and the Myth of Resource Efficiency Improvements Blake Alcott,Mario Giampietro,John M. Polimeni,Kozo Mayumi,2012 The Jevons Paradox which was first expressed in 1865 by William Stanley Jevons in relation to use of coal states that an increase in efficiency in using a resource leads to increased use of that resource rather than to a reduction This has subsequently been proved to apply not just to fossil fuels but other resource use scenarios For example doubling the efficiency of food production per hectare over the last 50 years due to the Green Revolution did not solve the problem of hunger The increase in efficiency increased production and worsened hunger because of the resulting increase in population The implications of this in today s world are substantial Many scientists and policymakers argue that future technological innovations will reduce consumption of resources the Jevons Paradox explains why this may be a false hope This is the first book to provide a historical overview of the Jevons Paradox provide evidence for its existence and apply it to complex systems Written and edited by world experts in the fields of economics ecological economics technology and the environment it explains the myth of efficiency and explores its implications for resource usage particularly oil It is a must read for policymakers natural resource managers academics and students concerned with the effects of efficiency on resource use   **Efficient Metamathematics** Laurina Christina Verbrugge,1993   **Logical Investigations Into Dynamic Semantics** Willem Groeneveld,1995   **The Myth of Resource Efficiency** John M. Siekmann,G. Wrightson,2012-12-06 Kind of crude but it works boy it works AZan NeweZZ to Herb Simon Christmas 1955 In 1954 a computer program produced what appears to be the first computer generated mathematical proof Written by M Davis at the Institute of Advanced Studies USA it proved a number theoretic theorem in Presburger Arithmetic Christmas 1955 heralded a computer program which generated the first proofs of some propositions of Principia Mathematica developed by A Newell J Shaw and H Simon at RAND Corporation USA In Sweden H Prawitz D Prawitz and N Voghera produced the first general program for the full first order predicate calculus to prove mathematical theorems their computer proofs were obtained around 1957 and 1958 about the same time that H Gelernter finished a computer program to prove simple high school geometry theorems Since the field of computational logic or automated theorem proving is emerging from the ivory tower of academic research into real world applications asserting also a definite place in many university curricula we feel the time has corne to examine and evaluate its history The article by Martin Davis in the first of this series of volumes traces the most influential ideas back to the prehistory of early logical thought showing how these ideas influenced the underlying concepts of most early automatic theorem proving programs

   Morphology, Neurogeometry, Semiotics Alessandro Sarti,2024-06-03 Jean Petitot is a polyhedric thinker whose contributions has been fundamental in a number of disciplines such as epistemology morphodynamics differential geometry structural semiotics neurogeometry phenomenology linguistics cognitive grammars the theory of catastrophes social sciences literary studies and aesthetics This book is a homage to his huge contribution about the main concepts of morphogenesis and meaning that constitute the center of gravity around which Petitotian reflection revolves and returns The scientific path of Jean Petitot develops between these two poles topology and meaning At stake it was to challenge the hiatus separating the exact sciences from the humanities that was the main point of the Petitot seminar of EHESS Epistemology of Models By designing the appropriate qualitative dynamics between the two poles form and meaning it is possible to understand the

Boulton,1994 Abstract The HOL system is a fully expansive theorem prover Proofs generated in the system are composed of applications of the primitive inference rules of the underlying logic This has two main advantages First the soundness of the system depends only on the implementations of the primitive rules Second users can be given the freedom to write their own proof procedures without the risk of making the system unsound A full functional programming language is provided for this purpose The disadvantage with the approach is that performance is compromised This is partly due to the inherent cost of fully expanding a proof but as demonstrated in this thesis much of the observed inefficiency is due to the way the derived proof procedures are written This thesis seeks to identify sources of non inherent inefficiency in the HOL system and proposes some general purpose and some specialised

techniques for eliminating it One area that seems to be particularly amenable to optimisation is equational reasoning This is significant because equational reasoning constitutes large portions of many proofs A number of techniques are proposed that transparently optimise equational reasoning Existing programs in the HOL system require little or no modification to work faster The other major contribution of this thesis is a framework in which part of the computation involved in HOL proofs can be postponed This enables users to make better use of their time The technique exploits a form of lazy evaluation The critical feature is the separation of the code that generates the structure of a theorem from the code that justifies it logically Delaying the justification allows some non local optimisations to be performed in equational reasoning None of the techniques sacrifice the security of the fully expansive approach A decision procedure for a subset of the theory of linear arithmetic is used to illustrate many of the techniques Decision procedures for this theory are commonplace in theorem provers due to the importance of arithmetic reasoning The techniques described in the thesis have been implemented and execution times are given The implementation of the arithmetic procedure is a major contribution in itself For the first time users of the HOL system are able to prove many arithmetic lemmas automatically in a practical amount of time typically a second or two The applicability of the techniques to other fully expansive theorem provers and possile extensions of the ideas are considered **Structures Mères: Semantics, Mathematics, and Cognitive Science** Alberto Peruzzi,Silvano Zipoli Caiani,2020-09-14 This book reports on cutting edge concepts related to Bourbaki s notion of structures m res It merges perspectives from logic philosophy linguistics and cognitive science suggesting how they can be combined with Bourbaki s mathematical structuralism in order to solve foundational ontological and epistemological problems using a novel category theoretic approach By offering a comprehensive account of Bourbaki s structuralism and answers to several important questions that have arisen in connection with it the book provides readers with a unique source of information and inspiration for future research on this topic Foundations of Computation Theory Akeo Adachi,1990 Measuring Information Efficiency by Bounded Oracle Computation Paul N. Aircraft Establishment in Farnborough he began his teaching career at the Royal College of Aeronautics Subsequently he moved to universities in Canada Israel and finally the United States A joint appointment in mathematics and philosophy at UCLA led to a position at Yale University where Robinson served as Sterling Professor of Mathematics until his untimely death at the age of fifty five Originally published in 1995 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905 **Programming Languages and Systems** Stephanie Weirich,2024-04-04 The two volume open access book set LNCS 14576 14577 constitutes the proceedings of the 33rd European Symposium on Programming ESOP 2024 which was held during April 6 11 2024 in Luxemburg as part of the European Joint Conferences on Theory and Practice of Software ETAPS 2024 The 25 full papers and 1 fresh perspective paper presented in these proceedings were carefully reviewed and selected from 72 submissions The papers were organized in topical sections as follows Part I Effects and modal types bidirectional typing and session types dependent types Part II Quantum programming and domain specific languages verification program analysis abstract interpretation
