This text is an excellent primer for teaching therapy skills, and although targeting graduate psychiatric nursing students would prove equally valuable for students of any mental health discipline. It is also a resource for experienced clinicians wanting to expand their understanding of trauma and how adaptive information processing might be used as an organizing framework for all psychotherapy.

DESCRIPTION: This is a how-to compendium of evidence-based approaches to practicing psychotherapy for both the experienced and neophyte advanced practice psychiatric nurse. This book integrates neuroscience with relationship science and unites disparate psychotherapeutic approaches into a model that is concise and straightforward yet sufficiently comprehensive to provide a framework for practice. The most useful therapeutic models are highlighted with principles and techniques of treatment for nurse psychotherapists and those with prescriptive authority. This second edition expands the award-winning first edition, providing guidelines, forms, and case studies to assist APPNs in deciding which treatment to use based on psychotherapy outcome studies and practice guidelines.

New Chapters in the Second Edition: Motivational Interviewing, Dialectical Behavior Therapy, Group Therapy, Family Therapy, Eye Movement Desensitization and Reprocessing, EMDR Therapeutic Approaches for Addictions, New CPT Codes, Reimbursement Awards, and Reviews for the First Edition.

APNA Media Award, AJN Book of the Year Award, 5 Star Amazon Reviews, 4 Star Doody Review.

Lays out a holistic paradigm for advanced psychiatric nursing APN practice by drawing upon a neuroscience of information processing, human development, attachment theory, and trauma, and explains the essentials of psychotherapy by melding principles underlying the therapeutic alliance, adaptive information processing (AIP) change, and a hierarchically arranged treatment format that fosters healing through the resolution of dysfunctional memory.
