13.1 Air Compressor

13.1.1 Description and Operation of the Air Compressor

The Series 60 air compressor is mounted to the rear of the gear case on the left side of the engine.

The air compressor drives the engine fuel pump which is bolted to the rear end of the compressor. The air compressor is designed to accept a drive coupling placed between the air compressor and fuel pump. The engine provides a continuous supply of oil to the compressor. Oil is routed from the oil passage in the gear case to the compressor oil inlet.

Detroit™ offers two sizes of air compressors on Series 60 engines: the single cylinder BA-921 rated at 16 cubic feet per minute (cfm), and the twin cylinder BA-922 rated at 32 cubic feet per minute (cfm). Both compressors are adaptorless style installations.

Note : An air compressor oil test card (DD5524) is available to test engine-mounted air compressors for excessive oil leakage. Contact an authorized Detroit™ service outlet for details.

The air compressor is designed to permit direct installation of the compressor onto the gear case.

The Series 60 air compressor is flange-mounted to the rear of the gear case, located on the left side of the engine.
