Squire, P.E., Ph.D., Julie Phillips Brown, Ph.D., 2019-03-08 Computer Tools for Electrical Engineers MATLAB SPICE is designed to meet the specific needs of electrical and computer engineering undergraduates with little or no prior experience with programming and matrix algebra Computer Tools focuses on the use of MATLAB within an electrical and computer engineering curriculum and it concludes with circuit simulation using the freely available application LTspice by Analog Devices The text emphasizes the development of practical skills that students will use in future EE and ECE coursework with programming chapters practical examples and problem sets that address common electrical engineering concerns The design of Computer Tools also draws upon the authors extensive involvement in pedagogical research writing and active learning strategies Programming for Electrical Engineers James C. Squire, Julie Phillips Brown, 2020-07-08 Programming for Electrical Engineers MATLAB and Spice introduces beginning engineering students to programming in Matlab and Spice through engaged problem based learning and dedicated electrical and computer engineering content The book draws its problems and examples specifically from electrical and computer engineering covering such topics as circuit analysis signal processing and filter design It teaches relevant computational techniques in the context of solving common problems in electrical and computer engineering including mesh and nodal analysis Fourier transforms and phasor analysis Programming for Electrical Engineers MATLAB and Spice is unique among MATLAB textbooks for its dual focus on introductory level learning and discipline specific content in electrical and computer engineering No other textbook on the market currently targets this audience with the same attention to discipline specific content and engaged learning practices Although it is primarily an introduction to programming in MATLAB the book also has a chapter on circuit simulation using Spice and it includes materials required by ABET Accreditation reviews such as information on ethics professional development and lifelong learning Discipline specific Introduces Electrical and Computer Engineering specific topics such as phasor analysis and complex exponentials that are not covered in generic engineering Matlab texts Accessible Pedagogically appropriate for freshmen and sophomores with little or no prior programming experience Scaffolded content Addresses both script and functions but emphasizes the use of functions since scripts with non scoped variables are less commonly encountered after introductory courses Problem centric Introduces MATLAB commands as needed to solve progressively more complex EE ECE specific problems and includes over 100 embedded in chapter questions to check comprehension in stages and support active learning exercises in the classroom Enrichment callouts Pro Tip callouts cover common ABET topics such as ethics and professional development and Digging Deeper callouts provide optional more detailed material for interested students *Exercises Solution Manual for MATLAB Applications in Chemical Engineering* Chyi-Tsong Chen, 2022-06-30 This self study solution manual in accompany with the book MATLAB Applications in Chemical Engineering is designed to provide readers with the key points of solving exercise

problems at the end of each chapter which therefore instructively guides readers to familiarize themselves with the related MATLAB commands and programming methods for various types of problems. Additionally, through the assistance of this solution manual, the readers would profoundly strengthen their logical abilities, problem-solving skills, and deepen their applications of MATLAB programming language to solve analysis, design, simulation, and optimization problems arising in related fields of chemical engineering. The preparation of this manual is not for directly providing solutions but through key guidance, overview, and analysis and instructional solution steps to gradually cultivate readers' problem-solving skills.

MATLAB Manual, Ordinary Differential Equations John C. Polking, 1995 **MATLAB for Electrical Engineers and Technologists** Stephen Philip Tubbs, 2010-05

MATLAB is a popular program. A MATLAB website states: Over 1 000 000 engineers and scientists use MATLAB and Simulink. Monster.com has hundreds of advertisements for jobs requiring MATLAB. The first purpose of this book is to quickly teach an electrical engineer or technologist how to use MATLAB. The reader learns by example. Complete keystroke to keystroke details are provided for problem solution and documentation. Most of this book's examples demonstrate MATLAB's abilities as a stand-alone programming language for performing numeric electrical computations. Also, two MathWorks add-on programs are demonstrated: the Optimization Toolbox and Simulink. The second purpose of this book is to demonstrate MATLAB solutions of practical electrical problems. The simplest and most basic uses of MATLAB are in the first examples. Later examples demonstrate more complex capabilities. The reader could use the examples' solutions as starting models for his own programs. It is assumed that the reader has an analytical electrical background of the sort that would be gained in a university electrical engineering or electrical engineering technology program. MATLAB is available in a free 30-day Demonstration version. Its key features can be learned in 30 days.

PID and Predictive Control of Electrical Drives and Power Converters using MATLAB / Simulink Liuping Wang, Shan Chai, Dae Yoo, Lu Gan, Ki Ng, 2015-03-02

A timely introduction to current research on PID and predictive control by one of the leading authors on the subject. PID and Predictive Control of Electric Drives and Power Supplies using MATLAB/Simulink examines the classical control system strategies such as PID control, feed forward control, and cascade control, which are widely used in current practice. The authors share their experiences in actual design and implementation of the control systems on laboratory test beds, taking the reader from the fundamentals through to more sophisticated design and analysis. The book contains sections on closed-loop performance analysis in both frequency domain and time domain, presented to help the designer in selection of controller parameters and validation of the control system. Continuous-time model predictive control systems are designed for the drives and power supplies, and operational constraints are imposed in the design. Discrete-time model predictive control systems are designed based on the discretization of the physical models, which will appeal to readers who are more familiar with sampled data control systems. Soft sensors and observers will be discussed for low-cost implementation. Resonant control of the electric drives and power supply will be discussed to deal with the problems of bias in sensors and unbalanced three

phase AC currents Brings together both classical control systems and predictive control systems in a logical style from introductory through to advanced levels Demonstrates how simulation and experimental results are used to support theoretical analysis and the proposed design algorithms MATLAB and Simulink tutorials are given in each chapter to show the readers how to take the theory to applications Includes MATLAB and Simulink software using xPC Target for teaching purposes A companion website is available Researchers and industrial engineers and graduate students on electrical engineering courses will find this a valuable resource *Matlab - Modelling, Programming and Simulations* Emilson Pereira Leite,2010 Student Manual for Digital Signal Processing with MATLAB John G. Proakis,Vinay K. Ingle,2007 Education Manual United States. War Department,1945 **Programming and Engineering Computing with MATLAB 2018** Huei-Huang Lee,2018 This book is designed for undergraduate students completely new to programming with MATLAB Case studies and examples are used extensively throughout this book and are at the core of what makes this book so unique The author believes that the best way to learn MATLAB is to study programs written by experienced programmers and that the quality of these example programs determines the quality of the book The examples in this book are carefully designed to teach you MATLAB programming as well as to inspire within you your own problem solving potential Most of the examples used in this book are designed to solve a whole class of problems rather than a single specific problem A learn by doing teaching approach is used all through the book You are guided to tackle a problem using MATLAB commands first and then the commands are explained line by line This process of learning through hands on experience is one of the most efficient and pain free ways of learning MATLAB This approach together with the extensive use of ordered textboxes figures and tables greatly reduces the size of the book while still providing you with a book that s comprehensive and easy to follow The first chapter of this book introduces the MATLAB programming environment and familiarizes you with MATLAB s core functionality Chapters two through nine discuss basic MATLAB functionalities in a progressive and comprehensive way The chapters start out simple and build in complexity as you advance through the book Chapters ten through thirteen cover advanced topics that are particularly useful in college programs Each chapter consists of sections each covering a topic and providing one or more examples Related MATLAB functions are organized at the end of a section Additional exercise problems are provided at the end of chapters two through nine Examples in each section are presented in a consistent way An example is usually described first followed by a MATLAB script Any resulting text and graphics output and in some cases inputs that are produced from running a script are presented and discussed Finally the remainder of each section is devoted to explaining the purpose of the lines of the script *Electrical Engineering* Allan R.
