Campaigns Since Waterloo United with and made to flourish by war No incident has occurred analogous to the shattering of French hopes of creating a great empire in the Levant in the Bay of Aboukir There have been no sea fights to rank with Lepanto and Trafalgar Maritime strength has not in appearance governed the course of contemporary history since Waterloo to the same extent as prior to the decline of Buonaparte But a study of the campaigns since the Great War demonstrates that naval command exerts a very remarkable influence over land Operations under certain given conditions And it is the purpose of this volume to trace through the military annals of the past eighty years how sometimes indirectly at other times in decisive obvious fashion dominion on the waters has affected conflicts between the armies which the enmity of nations has brought into antagonism About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

The Evolution of Operational Art John Andreas Olsen,Martin van Creveld,2011 Broadly defined as the grey area between strategy and tactics operational art spans the theory and practice of planning and conducting campaigns and major operations aimed at accomplishing strategic and operational objectives in a given theatre of

operations An intermediate link between strategy and tactics has always existed but a distinct concept that encompasses a systematic and deliberate plan of campaign for major operations is a mere two hundred years old Based on country specific case studies this book describes how the concepts that underpin operational art originated how they received practical expression in various campaigns and how they developed over time The point of departure is the campaigns of the God of War Napoleon Bonaparte The book then proceeds with chapters on the evolution of operational art in Prussia Germany the Soviet Union Russia the United Kingdom United States Israel and China The final chapter deals with the future of operational art in irregular warfare Theory is critical to refining and improving existing methods of applying operational warfare and its importance cannot be overstated however to be useful theory and its accompanying vocabulary must be combined with a proper examination of historical trends and practical experience The present volume attempts to achieve that combination This book is a project of the Oxford Leverhulme Programme on the Changing Character of War *The Fear of Invasion* David G. Morgan-Owen, 2017 In this new study of the lead up to the Great War David G Morgan Owen deals with an aspect of the war seldom discussed for the simple reason that it never actually came to pass a German invasion of the United Kingdom Morgan Owen makes the case that this fear of invasion played a central role in the formation of British strategy
