Comparative E Government Integrated Series In Information Systems:

Comparative E-Government Christopher G. Reddick, 2010-08-19 Comparative E Government examines the impact of information and communication technology ICT on governments throughout the world It focuses on the adoption of e government both by comparing different countries and by focusing on individual countries and the success and challenges that they have faced With 32 chapters from leading e government scholars and practitioners from around the world there is representation of developing and developed countries and their different stages of e government adoption Part I compares the adoption of e government in two or more countries The purpose of these chapters is to discern the development of e government by comparing different countries and their individual experiences Part II provides a more in depth focus on case studies of e government adoption in select countries Part III the last part of the book examines emerging innovations and technologies in the adoption of e government in different countries Some of the emerging technologies are the new social media movement the development of e participation interoperability and geographic information systems GIS The e-Government Development Discourse Kelvin J. Bwalya, 2018-12-01 This book brings out current research and practice concepts articulating the research agenda for e Government When e Government was first conceived it was designed upon basic technologies where the emphasis was only on the simple display of government information for citizens to read Nowadays e Government design comprises many complicated modules such as upload and download consoles two way interaction consoles between citizens and government agents integrated government business processes presenting the whole of government and it does not depend solely on technology The complexity of e Government has now evolved to include political cultural economic social and technical dimensions Bringing all these difficult aspects together is so complicated that it needs carefully planned strategies informed by local contextual characteristics Rather than giving formulaic definitions and conceptual standpoints on many aspects of e Government as is the case in many e Government publications this book will explore the frontiers of global knowledge value chains by discussing current and future dimensions of e Government For example the book discusses the concept of data governance by exploring how actual opening up of government data can be achieved especially in a developing world context Further the book posits that opening government data should be followed by the opening up of government business processes in order to peddle the concept of accountability and responsiveness Much text on data governance has concentrated on articulating the basic definitions surrounding this concept Another very important topic explored in this book is regarding how the concept of decolonisation can be extended to e Government by providing practical examples as to how researchers in the developing world can contribute to the advancement of e Government as a scientific field of enquiry and guide its implementation thereof Decolonisation is advocated for in e Government research so that there is a balance in the inclusion of the Afrocentric knowledge into e Government advancement other than over reliance on the Euro Asia and America centric knowledge value

chains Mbembe 2015 As e Government is a very expensive undertaking the issue of funding has excluded African countries and a majority of the developing world from implementing e Government Despite funding being a critical cornerstone of e Government development there is a dearth of information on this topic Therefore this book provides a chapter which discusses traditional and innovative ways of funding e Government design and implementation which can go a long way in improving e Government penetration into the developing world Further the book explores how intelligent e Government applications can be designed especially in resource constrained countries A couple of emerging technology innovations such as fog computing and intelligent information technology are explored within the realm of e Government design Handbook of Research on E-Government in Emerging Economies: Adoption, E-Participation, and Legal Frameworks Bwalya, Kelvin Joseph, 2012-03-31 This book is a collection of knowledge on contemporary experiences on technological societal and legal setups of e Government implementation in emerging economies Provided by publisher **Analysis of the value of new generation of egovernment services and how can the public sector become an agent of innovation through ICT** Galasso, G.; Garbasso, G.; Farina, G.; Osimo, D.; Mureddu, F.; Kalvet, T.; Waller, P., 2016-01-01 The current social economic and technological developments are leading towards the emergence of a new generation of eGovernment Services defined within the scope of the study as Open eGovernment Services OGS Such OGS are open collaborative and digital based services characterised by a deliberate declared and purposeful effort to increase openness and collaboration through technology in order to deliver increased public value These open collaborative and co production features exist in all phases of the design deployment implementation and delivery of the service In this regard the objective of the study was to better understand what OGS are what is their value for society and how the public sector should innovate to foster their use and maximize their impact on society To this aim the study produced the following results 1 a definition and a taxonomy of OGS 2 an assessment of the value of OGS based on a costs benefits analysis aggregated and extrapolated across European countries completed with an assessment of the non monetized benefits 3 the assessment of how public sector innovation happens and how the implementation of OGS can be accelerated by mean of appropriate policy measures **Public Sector Transformation Through E-government** Vishanth Weerakkody, Christopher G. Reddick, 2013 Over the last decade governments in Europe and North America have attempted to improve efficiency of public services through Information and Communication Technology commonly branded as electronic government e government Public Sector Transformation through E Government explores the influence that e government has on public sector organizations the organizational complexities that result and its impact on citizens and democratic society This book examines e government s potential to transform public services from a theoretical perspective and provides practical examples from leading public sector institutions that have utilized e government as a basis to bring about change It further investigates the relationship between citizens and government and how they are affected by e government policies and programs Aimed at students and

researchers of public administration management and information systems this book serves as a welcome tool for examining and understanding e government and transformational change

E-Governance in India Bidisha Chaudhuri, 2014-06-05

E Governance has been one of the strategic sectors of reform in India since late 1990s under the rubric of good governance agenda promoted by International Organizations. As India's policy focus changed towards economic liberalization, deregulation and privatization, proliferating domestic and foreign investment, ICT Information Communication Technology has been one of the leading areas for such heightened investment. Consequently, there has been a burgeoning interest in deploying ICT in revamping the public service delivery and eventually the overall system of governance. This book analyses e Governance in India and argues that such initiatives did not take place in isolation but followed in the footsteps of broader governance reform agenda that has already made considerable impact on the discourses and practices of governance in India. Employing interdisciplinary methodology by combining approaches from the Political Sciences, Sociology and Postcolonial transcultural studies, this book presents a qualitative account of the policies and practices of e Governance reform in India along with a detailed case study of the Common Services Centres (CSCs) Scheme under the National e Governance Plan of the Government of India and its resultant impact on the overall system of governance. It unfolds general theoretical issues in terms of the relationship between technology and governance and the entanglement of politics, technology and culture in the complex whole of governance. This furthers our understanding of the impact of the transnational governance reform agenda on post colonial and post communist societies of the developing world. Making an important and original contribution to the emerging field of e Governance and to the existing body of research on governance in general, this book will be of interest to students and scholars of Political Science, Political Sociology, South Asian Politics and Governance
